## Barr's Pure Lawn Grass Seeds

Produce Beautiful Smooth Lawns, Tennis and Cricket Grounds, Bowling Greens, etc.

Renovate Lawns in September, after the wear of Summer.

The following Mixtures of Grass Seeds are composed of thoroughly cleaned seeds of highest quality only, and contain neither Clover nor coarse Grasses; they cannot fail to give the greatest satisfaction. The seed is sold by weight, as being the only correct method of estimating the quantity needed for a given space.

Sow 80 lb per acre, or 1 lb. to every 50 square yards, if the ground is required to be covered quickly, and for renovating bald patches, or where the grass is thin or poor, especially after a summer's hard wear and under trees, sow 20 to 30 lb. per acre or  $\frac{1}{2}$  lb. to every 50 square yards.

### Leaflet on the Management of Lawns free on application.

- Barr's New Mixture of Dwarf Evergreen Grasses for producing an Extra Fine Smooth Lawn, a special mixture of the linest-leaved and dwarfest-growing perennial grasses, which from their fine, close, slow habit of growth and pleasing colour are best suited for forming lawns of the shortest and linest herbage, and thus greatly economising labour in mowing.

  Per 1b. 2s. 3d.; 20 lb, for 42s.
- Barr's "Standard" Evergreen Grasses, for Garden Lawns, Tennis Courts, etc.
  This mixture is composed principally of the fine-leaved dwarf-growing grasses, all the seeds being highly cleaned and of pure and genuine quality. Per lb. 18. 8d.; 10 lb. for 16s.; 25 lb. for 38s.
- Barr's "Thames Embankment" Evergreen Grasses for Parks, Golf Links, Cricket Grounds, and Bowling Greens, a special mixture which has been found very successful on the Thames Embankment, and in the formation and renovation of many public and private parks and squares around London and throughout the country. Per lb. 1s. 3d.; 25 lb. for 30s.
- Barr's Special Mixture of Evergreen Grasses for sowing under Trees, a careful selection of those grasses most suitable for sowing under trees or in shady places. Per lb. 2s. 6d.; per 10 lb. 24s.
- Fine-leaved Fescue Grass (Festuca ovina tenuifolia), for sowing where little bulbs are to be naturalised, like Narcissi Cyclammeus, Mmimus, etc.; also Scillas, Chionodoxas, Snowdrops, etc. Per lb. 2s. 6d.
- Dutch Clover, Finest White. No Clover is included in our mixtures of Grasses, as we consider a lawn should consist of Grass alone. If Clover is desired, however, it may be used at the rate of 3 to 5 lb. per acre; but it is preferable to sow the Clover separately from the Grass Seed. Per lb. 18, 6d.

### Barr's Special Lawn Phytobroma.

- The best manure for Grass Lawns, Tennis Courts, Bowling Greens, Golf Links, etc.

  Apply Spring and Autumn, using 2 oz. to the square yard at each application.
- Barr's Lawn Phytobroma is composed of those ingredients calculated to encourage a vigorous growth of grass only, and in this respect differs from the potash manures, which are apt to stimulate clovers and coarse weeds. We can confidently recommend it for all grass-lands, as, by its use, a thicker growth and a richer colour will be obtained. It is a highly concentrated manure, and is therefore economical in use, a small quantity only being required at each application. Circular with fuller particulars sent on application.
- Nett Prices -2 lb, tin, 1s.; In bags -7 lb, 2s. 6d.; 14 lb, 4s. 6d.; 28 lb, 7s. 6d.; 56 lb, 12s. 6d.; 1 cwt., 20s. Prepaid Orders for 28 lb. and upwards sent Carriage Paid to any station in Great Britain or to any port on the Irish Coast.

### SPECIAL NOTICE.

### BULB SEASON, 1909.

Spring-flowering Bulbs generally have been late in ripening this season owing to the long-continued cold wet weather during June and July. Many sorts of Daffodils, Hyacinths, and Tulips therefore will not be ready to send out as early as usual, it being most important that bulbs should be thoroughly dried and in perfect condition before being sent out.

We are pleased to be able to report that the crops have turned out very well in spite of the somewhat unfavourable weather conditions, and we have every reason to believe that the bulbs will give very satisfactory results. Where bulbs are grown in pots, however, we recommend that they be left in the plunging bed (outdoors) rather longer than usual.

# A few Practical Hints on Bulb Culture. Culture for Spring-flowering Bulbs out of Doors.

**Proper Condition of Soil.**—Plant bulbs only when the ground is in a nice friable state, and never when the soil is wct and sticky; in such cases plant later when the soil is in a good friable condition. After digging or trenching, the ground should be allowed to settle at least ten days before planting.

Depth to Plant.—Many amateurs commit the fault of planting too deeply, and many bulbs are spoilt in this way annually (crocuses especially). A good general rule to follow is, to cover the bulb with soil once and a half to twice its own depth, but not more, measuring the bulb from base to shoulder. Thus a daffodil bulb measuring two inches from base to shoulder should be covered with three to four inches of soil, and a crocus bulb measuring one inch in depth with only one and a half to two inches of soil.

Proper time to Plant and Best Position.—Information on this subject is given at the heading of each family. Amateurs fail sometimes with bulbous plants through planting at the wrong season.

Manure for Bulbs.—All bulbs object to the ammonia in fresh stable manure, such therefore should never be used, but only well-decayed stable or cow manure; the material from an exhausted hot-bed is a good manure, especially on light soils. The safest manures for all bulbs growing outdoors is PHYTOBROMA (price 20/- per cwt.; 2/6 per 7 lbs.) or phosphatic basic slag (price 6/6 per cwt.; 1/-per 14 lbs.) for heavy soils, and crushed bones (price 12/6 per cwt., 1/- per 7 lbs.) for light and sandy soils. The PHYTOBROMA should be applied at the rate of 8 cwt. per acre, or 3 oz. per square yard, early in spring, when top growth is showing; PHOSPHATIC BASIC SLAG OR CRUSHED BONES should be put in the ground with the bulbs at the time of planting, the former at the rate of 1 ton per acre, or 7½ oz. per square yard, and the latter at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and after planting, sprinkle on the surface of the ground SULPHATE OF POTASH at the rate of 2 cwt. per acre or ¾ oz. per square yard (price 21/- per cwt., 1/9 per 7 lbs.). Where basic slag or crushed bones are used, PHYTOBROMA may also be given at the rate of 1½ oz. to the square yard in spring, when top growth is showing. On hot dry and sandy soils, old stable manure may with advantage be used, to act as a sponge to hold moisture in the soil; it should be dug in 15 to 18 inches deep, so as not to come in contact with the bulbs. Where stable manure is used we recommend also VAPORITE (see page 92) being mixed with it so as to destroy any injurious insect life it may contain.

For bulbs grown in pots 1 lb. of Phytobroma should be mixed with every bushel of soil, and a teaspoonful to each pot should be used as a surface dressing when the flower-buds are forming (see page 92).

Top Dressing.—Where possible, we advise a top dressing to all bulbs through the winter months with some light material such as long straw litter, cut heather, cut furze branches, etc., or cut fern bracken resting on pea sticks (cut fern used by itself lies too wet and is apt to rot the young growths). The advantage of this light covering is that it keeps the surface soil sweet by preventing the heavy autumnal rains from beating down the earth's crust; it also protects any early top growth.

Lifting and Replanting.—When bulbs are lifted they should not, if possible, be replanted on the same ground, but where other bulbs or plants have previously been growing: thus, where Tulips have been growing last season, plant Narcissi this autumn, and so on.

### Culture for Spring-flowering Bulbs in Pots or Boxes.

Time of Potting.—From the middle of September to the middle of October is the best month for potting Spring-flowering bulbs.

The best compost to use is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding  $1\frac{1}{2}$  lbs. of bone meal or 1 lb. of Phytobroma (see page 92) to every bushel of soil, which mix well together before using.

Sterilising Soil.—In order to destroy all injurious insect life it is a good plan to sterilise potting soil before adding the Phytobroma or bonemeal. This can be easily done by placing a bushel of soil in a sack, pouring over it a large kettle of boiling water and then spreading out the soil to dry. This will prevent a great deal of after trouble from worms or insects attacking the bulb roots.

The pots should be carefully washed out with boiling water and wiped dry before using. Never use dirty or wet pots.

Good drainage should be secured by placing three or more pieces of charcoal (in preference to broken crocks) over the drainage hole, and then covering with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with pieces of charcoal, and a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

Covering the Bulbs.—The larger bulbs need not be quite covered with soil, the level of which should be half an inch below the rim of the pot, to allow of watering when the bulbs are in growth.

### CULTURE OF BULBS IN POTS OR BOXES-continued.

After potting, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or a gravel path to prevent the entrance of worms. Then cover with Cocoa Fibre, ashes, or old decayed leaf soil, pressing down the covering material in between the pots, which should be completely buried to a depth of 3 to 4 inches from the top. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

The pots or boxes should remain plunged for a period of not less than twelve weeks, in order that the bulbs may get well rooted, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, eool greenhouse, or cold sitting-room free from draughts, and keep partially shaded for a few days, giving water gradually. Very weak liquid manure-water may then be given once a week until they come into bloom. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. Oa no account should bottom heat be given. A frequent mistake made in forcing bulbs is that they are removed from the plunging-bed too early, before they have made a sufficient quantity of fibrous roots. They are then at once subjected to heat, and failure is the result. It is a good plan, when bulbs are removed from the plunging-bed, to place an inverted flower-pot over them for a day or two to prevent any eheek from draughts to the young top growths.

Pot-Culture of Early Gladioli, Ixias, Sparaxis, Tritonias, Babianas, Calochorti, etc.

These bulbs start early into growth and therefore should not be potted up before the end of October to November. The pots should be plunged up to the rim only (not covered) in a cold frame, or under a south wall, for about three months, after which the treatment is similar to that for Spring-flowering bulbs.

### Culture of Spring-Flowering Bulbs in Vases and Bowls. Such as Hyacinths, Tulips, Daffodils, Crocuses, Scillas, Chionodoxas, Snowdrops, etc.

A charming effect can be obtained by growing spring-flowering bulbs in fancy vases and bowls, with or without drainage, by simply using our specially prepared Fertilised Fibre, Shell and Charcoal Mixture (3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet (an important matter where the vases used have no drainage holes); indeed, it is in every way preferable to soil for growing bulbs in fancy bowls and vases.

Three bulbs of N. Queen of Spain growing in a 4-inch "Doulton Ware" Vase, for a day, or the bulbs will suffer.

Culture.—Fill the vase or bowl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them. After planting, plunge the bowls or vases out of doors on a bed of cocoa fibre or ashes, and cover entirely with cocoa fibre, leaving them thus for about 12 weeks; they may then be transferred to a sunny window of a cool airy sitting room (selecting a window that gets the morning sun) or to a cool greenhouse placed close to the glass, where they may be flowered in the same way as pot Hyacinths; they should be kept as near the glass as possible, and given sufficient light and air to prevent the foliage becoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or a warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed.

Where it is not convenient to place the bowls outside they may be plunged in cocoa fibre in a cold frame, or cool airy cellar, giving sufficient water after planting to make the fibre mixture moderately damp. For the first week or two after planting, water must be given sparingly, sufficient only to keep the fibre mixture damp enough to encourage root action; as soon as the bulbs are well rooted, water should be given more freely, the fibre mixture being then kept quite moist. The fibre must never be allowed at any time to become dry, even

SPECIAL FANCY VASES AND BOWLS for growing Spring flowering Bulbs in.

We have had special vases made for us by Messrs. Doulton for the above-named purpose. The vases are of elegant shape, and without drainage holes, thus saving the use of saucers. They will be found most useful for Daffodils, Hyacinths, Tulips, Crocuses, Early Scillas, Snowdrops, Chionodoxas, Lily of the Valley, etc, either for table decoration or the greenhouse. During Summer they may be used for standing little pot plants in and other table decoration.

Barr's "Doulton-Ware" Bulb Vases (as illustrated), unglazed, neutral drab shade :-21 in diameter, -/9; 4 in. dia., 1/3; 5½ in. dia., 2/-; 7 in. dia. 3/- cach.

Ditto, glazed, in dark or light green :--21 in. dia., -/9; 4 in. dia., 1/3; 51 in. dia., 2/-; 7 in. dia. 3/- each. Fancy Decorated Japanese Bowls:-5 in. diameter, -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 81 in. di.., 3/-; 9½ in. dia., 4/-; 10¾ in. dia., 6/-; 12 in. dia., 8/6 each.

Barr's Fertllised Fibre, Shell, and Charcoal Mixture, 3/6 per bushel; 1/- per peck (bags free).

loveliest blue flowers of spring	- 1	_
NERINE	•	•
flexuosa alba, a rare and beautiful bulbous plant, bearing an umbel of about twelve snowy white flowers, with elegantly undulated and recurving petals, ht. 2 ft.; a fine subject for pot-culture in cool greenhouse, or to plant out of doors under a south wall. AWARD OF MERIT R.H.S. and R.B.S., 1906	2	6
marginata, a beautiful showy species from the south-western part of Cape Colony, bearing	3	
pancratioides, a beautiful species from Natal, with long slender leaves and tall spikes	3	6
Beautiful New Hybrids of rare crosses, varying in colour from pink to dark crimson,	2	3

PÆONY  albiflora, The Bride, undoubtedly the finest single white Pæony yet raised. The flowers are large, of a snowy white with golden anthers, and resemble huge white Water	h —s	. d
Lilies; it is also a wonderfully profuse bloomer and free grower, ht. 3 ft.		6
<b>lutea</b> , a beautiful species from the Yunnan Mountains, habit of growth resembling somewhat a Tree Pæony, flowers rich butter-yellow, a sterling novelty of great beautyyoung plants	10	6
PRIMROSE Evelyn Arkwright, a giant form of our native l'rimrose, with flowers as sweetly fragrant and of the same lovely shade, but as large as a five-shilling piece. AWARD OF MERIT R.H.S.	2	6
RAMONDIA pyrenaica alba, a beautiful white-flowered form of this lovely alpine; suitable for shaded erevices	,	6
SAXIFRAGA Ditton Crimson (new), a beautiful mossy variety raised at our Surbiton Nurseries, having bright fresh green foliage and large flowers opening a rich vivid crimson passing off soft pink, very early	3	0
SCHIZOCODON soldanelloides, a lovely Japanese alpine creeper with persistent evergreen bronze foliage, and producing dainty bright crimson fringed flowers during March and April, ht. 3 in.; it delights in a peaty soil and shady situation	3	6
<b>SHORTIA uniflora,</b> a charming Japanese alpine of spreading habit, bearing in early spring bright rose-coloured flowers resembling in form <i>Soldanella alpina</i> , ht. 3 in., rare; it requires peat and sand, and a shady situation	3	6
SPIRÆA—Two lovely New Varieties, being crosses between Spiræa chinensis and japonica compacta multiflora; valuable acquisitions both for out-door or greenhouse decoration. They are both good forcers. Awarded a Gold Medal by the R.H.S. at Holland House Show 1904.	3	
Peach Blossom, a very graceful plant well furnished with ercet plumes of the most lovely delicate flesh-rose flowers, borne on long flower stemsper doz. 12/6	I	3
Queen Alexandra, a handsome plant of elegant spreading habit and large flower plumes of a pretty light rose (or when forced a very pale rose)per doz. 12/6	I	3
<b>TRITONIA Prince of Orange,</b> a very beautiful variety of <i>T. crocata</i> , bearing very freely elegant branching racemes of very large glowing orange-scarlet coloured flowers; a fine bulbous plant for south borders, terrace vases, or for pot culture in cool greenhouse		
TULIPS—New Cottage Tulips and species. Mostly May-flowering.  Fireblaze (3), very large long flower, canary-yellow heavily flushed crimson-scarlet at margin,	3	6
and developing to a hery scarlet with orange shading, very showy, ht. 20 in.  per 100, 40/-; per doz. 5/6	0	6
Golden Bronze (4), flower large of beautiful saueer form, colour glossy golden-bronze shaded mahogany towards centre, bt. 26 in	2	0
Inglescombe Yellow (4), may be ealled a Yellow Darwin Tulip, large globular flowers of perfect form of a glossy canary-yellow, a remarkably beautiful flower, ht. 18 in. AWARD OF MERIT R.H.S., May 15th, 1906per 100, 42/-; per doz. 5/6	0	6
Kaufmanniana, Extra selected varieties, fine selected forms of this beautiful Tulip, flowers large, white, variously marked with shades of redper doz. 15/-	I	6
Lady of the Lake (2), a most lovely Tulip, flower a delicate pale lemon shaded primrose, very chaste, ht. 21 in	2	3
Louis XIV. (4), globular flower of immense size, with broad petals rich purple heavily flushed golden-bronze at margin, inside golden-bronze shading to bronzy purple, very tall and stately; a remarkably handsome flower, bt. 26 in. CERTIFICATE OF MERLY R B S		,
May 22nd, 1907	2	3
Quaintness (4), large handsome long flowers, inside shaded mahogany on a dark golden ground, outside flushed deep rose, very distinct. AWARD OF MERT R.H.S., 1905	3	6
retroflexa superba, a handsome new Tulip from the East with soft yellow flowers resembling <i>T. retroflexa</i> , but with broader recurved petals and larger, ht. 18 in. per doz. 21/-	2	
Scarlet Emperor (3), a grand border Tulip with very large bold flowers of a brilliant glowing scarlet, with rich clear yellow centre and black anthers. FIRST-CLASS CERTIFICATE R.H.S., May 17th, 1961per 100, 70/-; per doz. 9/-		10
Walter T. Ware, a grand Tulip and the richest deep golden of all, flowers globular, with broad petals, the three outer ones reflexing at the top, very beautiful. A wonderful lasting Tulip, ht. 18 in. Award of Merit R.H.S., May 15, 1905only a few bulbs for sale		
TULIP, Parrot, new break of colour.  Sensation, a remarkably handsome variety and a great novelty, flowers very large, with deeply cut and curling petals, heavily blotched and striped blackish purple on a white ground, quite a new colour in Parrot Tulips. Very scarce (only a few bulbs in existence)		

# Hardy Bulbs & Plants.

For extensive planting in Shrubberies, Wild Gardens, Woodlands, Grass Lands, etc.

CROCUSES NATURALISED IN GRASS IN A LONDON PARK.

#### A Few Remarks on Naturalising Bulbs in Grass, etc.

This fascinating phase of gardening deserves more attention than has hitherto been bestowed upon it. No sight is more delightful than the fresh brightness of spring-flowers growing freely in grass land or lending colour to woodland walks, hedgerows, and ditches, here and there nestling at the foot of trees, or establishing themselves on sloping banks.

For naturalising in grass spring flowers are especially suitable, as they bloom and are over before the grass grows tall enough to hide their beauty. Amongst our spring-flowering bulbs there are many gems which refuse to grow in cultivated borders, but when planted in grass, where they enjoy a cooler and more even temperature, they soon become established, and multiply freely until a regular colony is formed which greatly adds to the charm of the landscape.

All formality of arrangement should be avoided, the bulbs being scattered freely from the hand and planted where they fall. Large irregular breaks of one kind of bulb should be made in order to obtain the finest effect.

In planting under trees select spots where the soil is deepest and where the drip is least.

Those whose gardens are of limited size might make them very beautiful in spring, by utilising the fringes of their lawns and any grassy mounds or shady shrubbery walks for such spring favourites as Daffodils, Anemones, Scillas, Crocuses, Chionodoxas, etc., reserving the borders for summer- and autumn-flowering herbaceous plants.

In large gardens and parks ample opportunities are afforded for naturalising spring-flowering bulbs, and very beautiful results may be attained in this way.

In planting bulbs in grass Barr's Bulb Planter (see page 91), should always be used. It cuts out a clean piece of turf, leaving a hole to receive the bulb, and on making the second cutting clears itself of the first piece of turf, which lies ready at hand for covering the bulb. This handy implement saves an immense amount of time, and does not, as with an ordinary dibber, leave a hard resting-place for the bulb, while by its use the grass is not in the least disturbed. Planting should not take place while the ground is hard, but after the first autumn rains.

Among the many gems which lend themselves to wild gardening and naturalising, we would specially mention the following :-

Wood Anemones (see page t6), including the exquisite Anemone Robinsoniana and the deeper blue and slightly taller Ane none apennina and blanda; one must see these lovely flowers nestling in grass or against the roots of large trees, to appreciate them fully.

Alliums (page 13). Amongst these we would mention Allium Moly, with its bright yellow flowers, thriving anywhere; also the graceful little Allium neapolitanum, so useful for shady corners.

Anthericums (see below), very graceful and decorative in grass.

Asphodelus luteus and ramosus (page 11), two fine plants for naturalising in grass.

Ornithogalums (page 65), flowering freely anywhere, and producing a very heautiful effect when dibbled in on banks and blended with Tulips, Muscaris, etc.

Tulips. These may often be naturalised on banks where, in the same locality, if planted on the level they die out. Tulipa sylvestris and the dainty little Tulipa persica may be naturalised almost anywhere: the May-flowering Cottage Tulips (page 79) should be freely used for naturalising, especially *l'icotee, Parisian Yellow, macrospila, Gesneriana, Bouton d'or*, etc. Plant at least 6 to 9 inches deep. All Tulips thrive best in partial shade and where sheltered from keen winds.

Wood Hyacinths (Late Scillas) (page 69) should be planted freely in shady walks; they soon make themselves at home and seed plentifully, with the result of much beautiful variation in form

and character. Under pine and fir trees they may be naturalised with success.

Fritillaries (page 29). The purple and white Snakeshead Fritillaries (F. meleagris) are found growing wild in a few districts in England, and thus seen form a charming picture, full of grace and beauty. For shady corners they will be greatly appreciated, also when naturalised in grass.

Dog's Tooth Violets (Erythronium dens-canis, page 28) are levely little subjects for shady

places where the grass is not too rank.

Crocuses. In grass the bright fresh colours of spring Crocuses contrast charmingly with their carpet of green. The beauty of C. speciosus (page 25) in September must strike C. Tommasinianus (page 25) produces a lovely effect in February and March. The beauty of C. speciosus (page 25) in September must strike every observer, while

Chionodoxas (page 21) are amongst the most beautiful of early blue flowers, and should be largely used where the grass is kept short and not allowed to grow too coarse. C. Lucilia and sardensis are followed by the beautiful C. grandiflora and Tmolusii.

Scillas, early-flowering (page 69), such as sibirica, sibirica alba, bifolia, amana, etc., all charming

little subjects for naturalising

Muscari (page 62) "Heavenly Blue" may be termed the Queen of Blue Flowers; for a distant effect, massed on grassy banks or grouped for colour, it has no equal. M. betryoides caruleum and its varietics, flowering earlier than Heavenly Blue, are also charming little subjects to naturalise.

**Daffodils.** For these favourite flowers, we refer readers to our **Daffodil Catalogue**.

### System of Planting, Arranging, etc.

In the grouping of Bulbs for naturalisation avoid anything approaching formality, and let the arrangement be a free and unconventional one. A good plan is to scatter the bulbs loosely from the hand and plant them where they happen to fall, thus forming irregular sweeps and breaks of colour here and there.

THE SYSTEM OF PLANTING.—For planting bulbs in grass we have had a Bulb Planter specially made, and by its use much time is saved and the turf is not spoilt. Particulars as to its use are given on page 9. In shrubbery borders and in hard ground our special Bulb Dibber should always be used, the planting taking place after the first autumn rains; a hole is made the requisite depth, some fresh soil put in, and then the bulb inserted, after which the hole is filled up.

In Selecting Positions the first consideration should be what best suits the subjects to be planted: too often shade-loving plants are found struggling for existence in full sun, and vice versa. In the following pages at the heading of each family we indicate as far as possible its cultural requirements. In planting beneath trees select spots where the soil is deepest and the drip least, which means avoiding the main branches or arms.

CUTTING OF GRASS.—It is advisable that this be done as late in September as possible, so as to the hay crop, which may be cut at the usual season.

§ indicates those flowers which will thrive in shady places, under trees, on shady banks, etc., or may be planted in the open border.

\* indicates those bulbs, etc., which are essentially wood plants, and should only be grown in shady situations.

For full descriptions see body of Catalogue.

### DESCRIPTIVE LIST OF

### The Best Bulbs, Tubers, etc.

### FOR ALL SEASONS AND CLIMATES.

ALPHABETICALLY ARRANGED FOR EASY REFERENCE.

In the following pages we give descriptions, as far as space permits, of the various Bulbs, etc., with general notes as to their cultural requirements. The illustrations are mostly reproductions, on a greatly reduced scale, of photographs taken at our Surbiton Bulb Nurseries.

Great care is taken in the selecting of our Bulbs, these being drawn from the best bulb farms only. High-class Daffodils and Tulips, etc., also many little rare and beautiful bulbous plants, we are ourselves large growers of.

only. High-class Daffodils and Tulips, etc., also many little rare and beautiful bulbous plants, to ourselves large growers of.	ve a	ıre
Those bulbs and tubers marked thus x ripen late and are sent out from the m of October to March. All other bulbs, etc., are ready for despatch in September. O which embrace earlier and later ripening bulbs, etc., will be executed therefore in two each	rde par	ers ts.
* ABOBRA viridiflora, an elegant scarlet-fruited half-hardy perennial climber; plant outdoors in Spring and lift the tubers in Autumn, storing them in dry sand in a cool place away from frost		
* ACHIMENES, a charming family of plants with brilliantly coloured elegant flowers making a very pleasing decoration in the greenhouse from early Summer onwards; in colour they range from vermilion and scarlet to rose, lavender-blue, and white, etc. Pot in rich light soil in Spring (5 roots to a 5-inch pot) and plunge in a gentle bottom heat; when in bloom they may be removed to any ordinary greenhouse or conservatory.		
5 each of 10 distinct varieties, $10/6$ ; 5 each of 5 distinct varieties, $5/6$		
Beautiful Hybrids, mixed, containing a great variety of charming colours per 100, 10/6; per doz. 1/6	-	_
tubiflora (syn. Dolichodeira), a valuable but little known pot-plant for greenhouse, bearing trusses of long tubular white flowers which have a delicious fragranceper doz. 5/6	o	6
ACONITE-Winter. See Winter Aconite.		
ADONIS		
pyrenaica, a handsome plant, producing in spring large golden-yellow flowers; it prefers a shady situation, lt. 1 to 1½ ftper doz. 5/6	٥,	6
vernalis, bearing large star-shaped clear yellow Anemone-like flowers in April and May, charming when massed on rockwork or borders, ht. 3/4 ftper 100, 25/-; per doz. 4/6	0	5
amurensis. See Novelty List, page 5.		
,, fl. pl. Kikusaki. See Novelty List, page 5.		
,, fl. pl. var. Sandasaki. See Novelty List, page 5.		
× AGAPANTHUS (African Lily), valuable subjects for growing in tubs and pots, either for greenhouse or summer decoration in porches, on verandahs, terrace walks, and lawns, etc. They are also very effective planted out by streams, lakes, and ponds. During severe winters they should be covered with light litter or long manure, or in very cold climates lift the tubers in October and store in dry soil, replanting them in March. This plant is a gross feeder, and likes a rich soil with plenty of moisture while in growth.		
umbellatus, handsome umbels of blue flowers, ht. 3 ftper doz. 5/6	0	6
,, flore-pleno, a very handsome variety with fine double blue flowers, ht. 3 ftper doz. 10/6		0
,, albus, producing handsome umbels of flowers ranging from white to white shaded blue, ht. 3 ftper doz. 5/6	0	6
,, fol. variegatis, foliage handsomely striped, flowers light blue, ht. 3 ft.	2	О
Mooreanus, small blue flowers in graceful umbels, ht. 2 ft., per doz. 4/6	O	5
;, St. Pauli. See Novelty List, page 5.		
,, Weillighi. See Novelty List, page 5.		
* ALBUCA Nelsoni, a lovely bulbous plant from the Cape, producing in June handsome spikes of almond-scented pure white flowers, with brown stripe down petal (under glass <i>pure white</i> );		

	ъ.	
<b>ALLIUM</b> , a decorative and showy family of hardy Spring- and Summer-flowering bulbs, valuable alike for borders or rockwork and for naturalising in woods, etc.	:h;	. a
acuminatum, with beautiful soft rose-lilac-coloured flowers in umbels, ht. 1 ft., per doz. 1/6	0	2
,, Murrayanum, bearing umbels of bright rosy violet flowers, ht. 1 ft. ,, 2/6		
albo-pilosum, a striking species with large heads of lilac flowers and downy white foliage		
azureum, handsome intense blue flowers, quite hardy, ht. 2 ftper doz. 3/6 descendans, heads of dark red-purple flowers, ht. 2 ft, 3/6		•
giganteum (syn. nobile), a handsome rare species with heads of greyish lilac flowers,		,

<b>karataviense</b> , a remarkably handsome plant, with very large broad glaucous-green foliage spreading close to the ground, and bearing large globular heads of reddish lilac flowers,		3
ht. \frac{1}{2}ft		_
<b>neapolitanum,</b> an elegant bouquet flower largely grown for the market, producing numerous heads of graceful white flowers; it is a charming plant to naturalise in shady woods, associated with the Wood Hyacinth, ht. 15 inchesper 100, 3/6; per doz. 6d.		_
Ostrowskianum (syn. oreophyllum), a charming species from Asia Minor, with harge heads of beautiful rose-coloured flowers, valuable for the rock garden and flower border, ht. ½ ft		_
pedemontanum (sym. narcissiflorum), rose-purple, drooping bell-shaped flowers in clusters, beautiful and very distinct, ht. \( \frac{1}{2} \) ft. AWARD OF MERIT R.11.S. 1901per doz. 5/6	0	6
pulchellum, graceful heads of bright rosy purple flowers, in July, ht. \(\frac{2}{3}\) ft		6
,, flavum, small canary-yellow flowers in graceful drooping umbels, very charming, July-flowering, ht. 3 ftper doz. 3/6		4
Rosenbachianum, producing large round heads of purple-rose flowers, a very showy variety, ht. 2½ ft		
roseum, bearing umbels of bright rose-coloured flowers, ltt. 1 ft., per 100, 4/6; ,, 8d.	-	_
triquetrum, white, striped green, pretty drooping umbels, ht. I ft. ,, 12/6; ,, 1/9	0	2
<b>zebdanense,</b> producing umbels of pure white flowers on slender crect stems, in May, ht. 1\frac{1}{4} ft	0	4
* ALSTRÖMERIA, these beautiful "Peruvian Lilies" are easy to cultivate, and produce in Summer abundance of showy attractive flowers, which last long in water when cut. They like a well-drained light soil and a sunny situation. Aurantiaca, chilensis, and lutea produce a most brilliant effect in the flower border. Plant with the top 4 inches below the surface, by preference close to a south wall or hedge, and protect, the first Winter, with leaves or litter. Pelegrina, Pulchra, and Revoluta are more tender, and delight in hot dry sunny situations, such as under a south wall, and require protection each winter; they also make fine plants for a cool greenhouse.		
aurantiaca (syn. aurea), flowers ranging from rich to dark orange, spotted carmine, very showy and valuable for cutting; it should be grouped in every herbaccous border, ht. 3 ft. per 100, 10/6; per doz. 1/6	0	2
aurantiaca major. See Novelty List, page 5.		
chilensis hybrida, mixed, beautiful shades of rose, crimson, yellow, buff, and blush, with orange-yellow and crimson markings, ht. 2 ft	0	2
Erembaulti, bright rose with green markings, interior of flower conspicuously flaked blood-crimson on a blush ground, ht. 2 ft	0	8

Scarlet King (syn. Yesuvius), flowers of perfect form and fully double, rich brilliant scarlet; a most striking flower, both in the flower border or the flower vase 25 03	6
Snowball, very beautiful snowy white curled flowers, resembling in form a white incurved Chrysanthemum. FIRST-CLASS CERTIFICATE	9

### BARR'S DOUBLE CAEN ANEMONES.

Mixed varieties, a grand strain, with flowers of great size and very double, in many brilliant varied shades of colour, ht. I ft., per 100, 21/-; per doz. 3/-.

ST. BRIGID ANEMONES.

SINGLE POPPY ANEMONES.

### ANEMONE ST. BRIGID. Semi-double Poppy Anemones.

A very lovely and distinct strain, of graceful habit and producing large flowers mostly semi-double with finely divided petals, of the most brilliant varied colours, all showing a handsome blue-black central boss, ht. I ft.; the flowers are greatly prized for cutting .....per 1000, 70/-; per 100, 7/6; per doz. 1/3

ANEMONE ST. BRIGID, extra fine selected strain, highly recommended, per 100, 10/6; per doz. 1/6

### BARR'S SINGLE POPPY ANEMONES. Coronaria varieties.

These handsome Single Anemones have large beautiful saucer-shaped Poppy-like blossoms, and during mild seasons, or in sheltered situations, flower continuously throughout the Winter and Spring. Those planted in early Spring are very gay in May or June.

Victoria Giant (Empress or Caen Anemones), Extra Fine Strain, a magnificent robust-growing race of Single Poppy Anemones with immense saucershaped flowers of the most brilliant and varied colours, ht. 1 ft., per 1000, 42/-; per 100, 4/6; per doz. 8d.

"Eastern Queen," a grand showy Single Poppy Ancmone from Syria, bearing large handsome flowers of a brilliant deep vermilion with narrow central creamy ring and blue-black boss, producing a very brilliant effect in the Spring flower garden, ht. 4 ft., per 100, 8/6; per doz. 1/3.

"His Excellency" (new), the largest of all Single Scarlet Poppy Anemones. It has a robust growth and bears very large handsome dark velvety scarlet flowers with large blue-black central boss; a grand flower (a small proportion may flower a large white or blush shade, as the strain is not yet quite fixed); per 100, 10/6; per doz. 1/6; each 2d.

"The Bride," flowers pure white, beautiful, ht. 3/4 ft., per 1000, 18/; per 100, 2/-; per doz. 4d.

Scarlet, a grand showy variety, ht. 5 ft., per 1000, 30/-; per 100, 3/6; per doz. 6d.

**Blue,** handsome blue flowers, ht.  $\frac{3}{4}$  ft., per 1000, 25/-; per 100, 2/9; per doz. 5d.

Extra Fine Mixed Single Poppy Anemones, containing many beautiful and brilliant colours, ht. 3/4 ft., per 1000, 28/-; per 100, 3/-; per doz. 5d.

ANEMONE Hortensis (syn. Stellata), The Starry Windflower of the Riviera, or Peacock Anemone. These Starry-flowered Single Anemones are remarkable for variety of brilliant colours, elegant flowers, and graceful foliage. A light well-drained soil in a warm sheltered situation suits them best; on rockwork they look charming; they make good pot-plants, six roots in a pot, and are valuable as cut flowers. Plant in October and November. p. 100 p. doz. s. d. s. d

Beauty of Athens, a very pretty variety found by Mr. Peter Barr near Athens, with large flowers ranging in shade from brilliant carmine to cherry rose and blush, ht. 4 ft. .....each 8d. Scarlet Gem, brilliant crimson-scarlet flowers with silvery centre, very showy, 9 6...1 4 ht. ½ ft .....

White Gem, remarkably beautiful, having silver-white petals and a pretty indigo-

Choice Mixed Starry Windflowers, beautiful shades of soft rose-carmine, brick-red, scarlet, etc., etc., ht. ½ ft.

8 6...1 3

Sweet-scented Double Chinese Pæonies, for Autumn planting.

ANEMONE fulgens, The Scarlet Starry Windflower of the Pyrenees and Greece. This beautiful early Spring flower with its rich dazzling scarlet colour and light elegant growth should be used largely in wild gardens, orchards, woodlands, on banks, etc. If planted early in Autumn, flowers may be gathered, weather permitting, from Christmas; its hardiness is beyond all question, and the roots may be safely planted any month from August to February, in a position protected from ground winds and with a sunny or S.W. aspect. Anemone fulgens likes a well-drained rich soil (rather dry by preference). Never plant the roots while the ground is wet.

fulgens, flowers beautiful rich dazzling searlet with blue-black eentral boss, ht. 2 ft. s. d. s. d per 1000, 60/-6 6...1 0 Extra strong roots 8 6...1 annulata, flowers brilliant glowing searlet, with ereamy white central ring and blue black boss, ht. 3 ft. .....per 1000, 50/-6...0 10 5 grandiflora, very handsome large flowers, glowing scarlet, with central yellowish ring and blue-black boss, ht. I ft...... 12 6...1 9 flore-pleno, handsome double flowers of a glowing deep searlet, lasting long when eut; plant in good rieh soil with a sunny aspect, ht. 8 in. In cold and sunless seasons the flowers are inclined to come green...... 6 6...1 0 græca (The Greek Scarlet Windflower), a beautiful species from Greece, bearing handsome deep glowing crimson-searlet flowers with broad petals and black central boss, in some cases also a creamy central ring, lt. 8 in.; very effective in beds and borders...per 1000, 80/-8 6...1 marmorata, a remarkably showy variety with vermilion-coloured

## flowers flaked and marbled white, ht. $\frac{3}{4}$ ft. .....each 6d. — 5 6 ANEMONES, Various Beautiful Species for Autumn Planting. Where

Daffodils are naturalised the following Anemones should be freely used:—Anemone apennina, the blue Mountain Windflower, forms a dense cushion of rich blue and is one of the loveliest of dwarf Spring flowers. A. blanda resembles A. apennina in flower, but blooms a month earlier. The varieties of Anemone nemorosa (the true Wood Anemone), being shade-loving plants, should be under trees or in shady nooks on rockwork; naturalised in grass they present a picture full of grace and beauty. A. palmata likes a damp spot during summer. For other beautiful Anemones, see our Hardy Plant Catalogue.

ANEMONE BLANDA, apennina, beautiful single sky-blue flowers, as large as a half-crown, a gem for the rock-garden or border, ht. 1/2 ft. Extra fine roots, per 1000, 40/-; per 100, 4/6; per doz. 8d. **alba,** flowers white, very beautiful, ht.  $\frac{1}{2}$  ft. ......................., 6/6; 1/-,, fl. pl., a remarkably pretty variety, with full-double pale blue flowers, lasting a long time, ht. \(\frac{1}{2}\) ft. .....per 100, 15/-; per doz. 2/3 3 purpurea, producing very beautiful mauve-coloured flowers. ht. 2 ft per 100, 6/6; per doz. 1/blanda, true (The Grecian Blue Windflower), brilliant deep blue, ht. 3 in. per 100, 15/-; 2/3 alba, flowers white with slight shading of pale blue on back of petals, pretty, ht. 3 in.....per 100, 25/-; per doz. 3/6 grandiflora, flowers large and light blue, very beautiful, ht. 3 in. per 100, 21/-; 3/scythinica, flowers white, shaded blue, a gem, ht. 3 in. ......... var. taurica, flowers ranging from pale blue and almost white, with a few deeper-coloured blues, ht. 3 in. .......per 1000, 70/-; per 100, 7/6; per doz. 1/3 Hepatica. CALLA, or Arum Lily. See Richardia.		

CALOCHORTUS, or more popularly known as the Butterfly or Mariposa Tulips, Globe Tulips and Star Tulips. These lovely Californian bulbs, although belonging to the same Natural Order as the Tulips of our gardens, bear little resemblance to them. They flower through June and July,

and for delicacy of texture and brilliancy of colour are unsurpassed; they deserve a place in every hardy flower border and rock garden.

As cut flowers the Calochorti are of great value, the flowers lasting well and the buds opening readily in water; the varieties in the Mariposa or Butterfly section are especially suitable to cut, having long stems and being profuse continuous bloomers. They all make charming pot-plants (several bulbs in a pot) for the cool greenhouse or Cape pit.

CULTURE OUTDOORS.—The Calochorti are all quite hardy. The "Mariposa" and "Star Tulips" require a sunny position and light gritty or sandy soil on slightly raised beds to ensure perfect drainage; plant from September to end of November, 2 to 3 inches deep, and 3 inches apart. Cover the beds after planting with straw or cut heather, to keep surface sweet and as a protection in case of early growth; remove the covering in March. A position facing south and sunny spots on the rockery are specially suitable. When in full growth give occasional soakings of water, but not too frequently. After flowering, ripen off by placing glass over them, and take up when foliage dies down.

The "Globe Tulips," being woodland plants, like partial shade and a porous soil composed principally of leaf mould.

Selections of Calochorti, from Sections I., II., and III.:

CHINESE SACRED LILY. See Narcissus Polyanthus, page 64.
CHIONODOXA (Glory of the Snow). The Chionodoxa is one of our earliest as well as loveliest Spring flowers, and when established its sheets of blue in very early Spring are a great
attraction in the garden. It should be largely used in borders and dotted over bulb beds, also
massed on rockwork. Once planted it comes up year after year, the flower spikes increasing in size and beauty. When associated with <i>Narcissus minimus</i> , the effect is very charming. For
an effect the first season, plant the bulbs close together. The Chionodoxa may be grown also in pots and vases and had in bloom early in January, if brought on in a cold frame or cool greenhouse
close to the glass.  Luciliæ (The Glory of the Snow), colour deep Nemophila-blue, with clear snow-white centre

× CROCOSMA		
aurea, lighting up the garden in September with its graceful raeemes of brilliant reddish orange flowers, which are greatly prized for cutting, lt. 3 ft. The best treatment is to pot up the corns (6 in a 6-inch pot) in November or December, keep them in a cold frame until April, and then plant out in a peaty soil (not too dry) with warm sunny aspect. Unless the district is a cold one they may be left to establish themselves, but during winter a light eovering should be given. The Crocosma aurea may also be grown on as a pot plant, and affords a brilliant decoration indoors in autumn	0	4
imperialis, a grand acquisition, producing in September flowers nearly 4 inches across, and of a fiery orange-red colour; a tall and vigorous grower, and exceedingly showy, ht. 4 ft. FIRST-CLASS CERTIFICATE R.H.Sper doz. 21/-	2	0
CROCUSES		

#### CROCUSES.

The Crocus is one of the earliest flowers of Spring, and occupies a deservedly prominent place in every garden. Planted as an edging in triple lines of one or more colours, the effect is striking. No Spring display surpasses that of broad wavy bands of golden-yellow, striped, purple, or pure white Crocuses when they expand their blossoms, in February and March. In lawns and pleasure parks, planted in the grass, Croeuses are extremely effective. In wild gardens, woodland walks, etc., the Crocus should be associated with the violet, the primrose, and the oxlip.

For outdoors plant as shallow as possible, barely covering the bulb; many amateurs plant too deeply, which is often the cause of Croeuses failing to bloom. Early plantings give the best results.

### BARR'S CHEAP SHOWY CROCUSES for Large Plantings.

For a gorgeous effect in early Spring nothing can equal the Golden-Yellow Crocus, large masses of which attract the eye at a great distance. The value of the larger sized bulbs of Yellow Crocuses is that they produce more flowers to a bulb, and are therefore more decorative.

### BARR'S CHOICE NAMED LARGE-FLOWERED CROCUSES. Large Bulbs for Pot-Culture and Flower Beds, etc.

The following large flowered named Crocuses are the best in cultivation, and we can confidently recommend them for planting in groups, edgings, select beds, and in designs. To obtain the finest effect the bulbs should be planted an inch apart. When grown in pots, plant thickly, and plunge the pots in ashes up to the rims only. When removed from under the ashes, place in an airy situation, and give water very freely at the roots. A charming effect is obtained by growing Crocuses in shallow saucers, using Barr's Fertilised Fibre and Shell Mixture, or Pebbles and water (the bulbs touching one another). The saucers should be kept in an airy room without a fire, where gas is seldom burnt and where they can get plenty of light. When the bulbs are coming into bloom they may be brought into the sitting-room.

### CROCUSES.

#### BARR'S AUTUMN-, WINTER- AND SPRING-FLOWERING SPECIES.

No hardy garden is complete without these floral gems, which carry on a continual display of bloom from August to March, and light up the garden with their bright colours in winter when few other plants are flowering. On rockwork and in grass they form a charming picture, while in pots they make a very pretty effect. In nomenclature we have followed Mr. George Maw's Monograph on the Crocl. The delightful effect produced by masses of C. speciosus, C. longiflorus, C. sativus, C. Tommasinianus, etc., when naturalised, can only be realised by those who have witnessed it.

CULTURAL DIRECTIONS.—Any ordinary garden soil suits these Crocuses. Plant the bulbs as early as possible, and very shallow, barely covering them with soil.

CYCLAMEN Persicum, for Greenhouse, Large-Flowered Strain, a great improvement on the old strain; plants are of fine compact habit, with flowers large, of rich and delicate colours, and standing well above the handsome foliage.

Plants in Pots set with bud or in bloom, supplied from September to December -- per doz. 15/-, 21/-, 25/-, and 30/-; each 1/5, 2/-, 2/6, and 3/6, according to size.

Seed for November Sowing......per pkt. 2/6 and 3/6

### CYCLAMEN. HARDY SPECIES for Rockwork Out-of-Doors.

HARDY CYCLAMEN NATURALISED AT FOOT OF A TREE.

These **Hardy Cyclamen** require perfect drainage, and shelter from ground winds and early morning sun; established at the bottom of old walls facing north or on rockwork they are very beautiful, while, nestling in the grass, near the roots and under the shelter of old trees, they produce a most charming effect. For planting in among fern plantations they are also good subjects. In making up a soil for the hardy Cyclamen, add a liberal proportion of old lime or mortar rubble with some well-decayed leaf soil and good fibrous loam. *Repandum* should, in cold districts, be planted in warm protected situations on rockwork, and be given a slight protection in winter with cut heather, long straw or leaves till March, or it may be grown in a cold frame. All the hardy Cyclamen like being planted shallow, except *Europæum*, which should be put in 4 to 6 inches deep. After planting these Cyclamen give a mulching of well-decayed leaf soil.

FREESIA. Freesias are prized for their delightfully fragrant graceful flowers, which last longer in water than almost any other flower. Pot up the corms from August to October, 6 in a 5-inch pot, or 12 in a 7-inch to make a better display. The tops of the bulbs should be buried 2 inches below the surface of the soil. which should be a compost of good mellow loam, well-decayed		

FREESIA- continued.

A POT OF FREESIAS.

farmyard manure and a little bonemeal. Care must be taken that there is good drainage. Stand the pots outside on a sunny border and keep them slightly shaded until growth is showing, when expose them to full sun. Before severe frost comes on, remove the pots to the sunny part of a greenhouse and give plenty of air (not draught). Or they may be placed in an airy, sunny window, care being taken not to expose them to draught or the drying heat arising from gas. When the flower buds are opening, a little weak liquid manure water will be found beneficial. If required for Christmas decoration the corms should be potted up in August, grown out of doors as described above, and about the beginning of December be gently forced.

FRITILLARIA, an extremely elegant family of hardy plants, bearing graceful drooping bellshaped flowers in May. The large-flowered varietics are charming for grouping in borders

shaped flowers in May. The large-flowered varieties are charming for grouping in borders and for clumps on rockwork; while the smaller-flowered dwarf kinds, like armena, aurea, and pudica, ctc., are gems for warm sheltered nooks on the rockery, where they should be planted 2 to 3 inches deep. The Meleagris vars. produce a pretty effect naturalised in grass in shady glens or under large trees. Plant the bulbs about 6 inches deep (the lighter the soil the deeper), placing a little sharp sand around the bulbs. As pot plants (several in a pot) they are very pretty. The new varieties of Meleagris are very fine.

FRITILLARIA imperialis—the Crown Imperial.	_	-

The Crown Imperial (Fritillaria imperialis) is a stately hardy border-plant, very effective in Spring, especially when grouped in woodlands, wild gardens outbards etc. Its tall

in Spring, especially when grouped in woodlands, wild gardens, orchards, etc. Its tall, stout, leafy stem terminates in a cluster of large drooping bell-shaped flowers, surmounted

FRITILLARIA IMPERIALIS (CROWN IMPERIAL).

by a whorl of fresh green leaves. For forming bold groups in the permanent border or on lawns it is of great value, and should be allowed to remain undisturbed. To obtain the best success, plant the bulbs in September, the top 4 to 5 inches below the surface, and by preference on their sides, to prevent moisture accumulating in the centre. They flourish in a good deep loam. We offer specially strong selected bulbs, superior to what are usually sold, and which we hope will all bloom the first season. The Crown Imperial, however, is a plant which requires to become established to do well.

Deep Orange-red, very showy, ht. 3 ft.

#### GALANTHUS (Snowdrop).

In the early Spring months there is nothing more beautiful than a sheet of the snowy graceful blossoms of the SNOWDROP. In planting, the bulbs should almost touch each other. An effect of surpassing beauty may be obtained by associating SNOWDROPS with SCILLAS SIBIRICA and BIFOLIA, CHIONODOXAS, WINTER ACONITES, etc. Where possible such plantings should be permanent, and the surface of the soil top-dressed in Summer and sown with annuals, such as Nemophila, Leptosiphon, etc., or planted with surface-rooting bedding plants. The SNOWDROP and CROCUS when planted in alternate circles are very effective, and follow each other so closely that no gap is left in the succession.

The SNOWDROP looks charming when nestling in grass, on hedge banks, etc. The turf need not be disturbed if Burr's Bulb Planter be used (see page 91); this cuts out clean holes large enough to take two or three bulbs.

### BARR'S SUMMER-FLOWERING VARIETIES.

For Autumn and Winter Planting.

These beautiful Early-flowering Gladioli should be largely planted for supplying cut bloom from May to July; and for the fine effect they produce in the flower garden. G. Colvillei The Bride is extensively grown in pots and boxes for cutting during April, May, and June. All may be grown in pots for indoor decoration.

CULTURE OUTDORS.—Select a situation protected from cutting winds and shaded from the midday sun. Deeply dig the ground, working in plenty of rotten manure in the underspit, and see that the soil is made light and friable. Plant the bulbs from October to November by preference, although they may be put in as late as January. They should be put in at a depth of four to five inches, and in the case of the later plantings the bulbs should be soaked in water a few hours previously. Before severe frost comes on cover with a little long straw litter or other light material, which remove in March. If the Summer is dry and the weather hot, give an occasional good soaking of water or weak liquid manure. A mulching of well-decayed manure in early summer will considerably benefit the plants.

CULTURE FOR CONSERVATORY DECORATION.—Plant three to five bulbs, according to size, in a 5- or 6-inch pot, and plunge in ashes up to the rim of the pot in a cold frame or pit, withholding water till the bulbs have started into growth; or, the pots may be buried up to the rim in ashes out of doors under a south wall, a light covering being given during severe frost. When the plants are in bud they may be removed to the conservatory or greenhouse.

### × EARLY SUMMER-FLOWERING HARDY GLADIOLI.

### ×GLADIOLUS BRENCHLEYENSIS. The Large-flowered Vermilion-Scarlet Gladiolus.

This well-known handsome Gladiolus blooms just before the Gladiolus Gandavensis varieties, and is one of the most valuable for bedding. By successional plantings a brilliant display of bloom may be had from middle of July to late autumn. A fine effect may be produced by massing this Gladiolus with Galtonia candicans, the snowy white spikes of which top the Scarlet Gladioli; both bloom about the same time.

### **×GLADIOLUS, NEW HYBRID BUTTERFLY.** (Gladiolus Lemoinei.)

These are the result of crossing the best forms of Gladiolus Gandavensis with Gladiolus purpureoauratus, and are without doubt the most beautiful of all Gladioli, and should have a place in every flower border; the flowers are of the most delicate and brilliant shades, and are all handsomely blotched with fine contrasting colours, reminding one of the beautiful Butterfly Tulips (Calochorti). They are hardy vigorous growers, and if planted early in April bloom from the middle of July to the middle of August. A descriptive list will be found in our Spring Bulb Catalogue.

# HEPATICA. Old English Flowers.

These are charming Spring flowers, and have been favourites in English gardens from time immemorial. Established on shady banks, in beds, borders, and on rockwork, they are most beautiful in early Spring. The Hepatica is a deep rooter and loves a deep loamy soil in somewhat shady and sheltered positions. Naturalised, the Hepatica looks charming. Plant from Autumn to early Spring.

# BARR'S CHOICE NAMED HYACINTHS.

For Glasses, Jardinets, Bowls, Pots, and for Exhibition.

Culture in Pots.—The soil should be a compost of good fibrous loam with a liberal addition of leaf-soil, sharp sand, and thoroughly well-decayed cow manure. Phytobroma (see page 92) may also be added at the rate of 1 lb. per bushel. The compost should be well mixed and left to stand some time

before being used. New pots should be well soaked in water before use.

In potting, barely cover the bulb, and let the soil be \( \frac{3}{4} \) in, below the rim of the pot, to allow for watering. After potting give one good watering and then place the pots outdoors on a bed of ashes, cover with six inches of cocoa fibre, and leave them exposed to all weathers. \( \frac{1}{10}\) then the bulbs have well rwoted, and made about an inch of top growth, they may be removed indoors, first into a subclued light, until the blanched foliage has attained its full green colour, and then into the sunniest situation at command in the greenhouse or conservatory. It is a good plan to place an inverted flower pot over the young growths for a few days after being removed from the plunging bed, as by so doing they are protected from possible draught. Abundance of air, a moderately moist atmosphere, and plenty of water at the roots are then necessary for early well-developed flower-spikes. \( A \) dry or frosty atmosphere or a draughty situation will cause the flower-buds to shrivel. \( Forcing \) should on \( y \) be done gently, the temperature not exceeding 60 degrees. \( A \) too frequent fault made in forcing Hyacinths is that they are subjected to heat before the bulbs are fully rooted.

#### HYACINTHS-CULTURAL NOTES -- continued.

For earliest flowers—namely, for January and Fehruary—pot middle of September and leave in the plunging bed 10 to 12 weeks.

If finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth should not be forced; pot up the bulbs middle of October and leave them plunged out of doors three months or more, according to season, then remove them to a mild temperature like that of a cool greenhouse, a sitting-room window, or frame, always selecting the sunniest and most genial situation.

Culture in Glasses.—We recommend only Single Hyacinths for glasses. The most reliable sorts for growing in glasses we have indicated by  $\Psi$ . Pure clean water (rain-water by preference) the same temperature as the room should be used, with a piece or two of pure wood charcoal in it. The bulb can be made secure in the glass by a piece of fish netting, and its base should at all times just touch the water. Place the glasses in a cool dark place to encourage root growth, and keep supplied with water as required. When nearly full of roots (not before), and an inch or two of top growth has been made, admit them to the light gradually, and then to the sunniest place at command where there is full light and an even airy temperature. Avoid a too dry or fresty atmosphere or a draughty situation, as such conditions will often cause the flower-buds to shrivel up. A little rain-water gently sprinkled daily on the green flower-spikes will assist in their development. Barr's Fertilised Filbre, Shell and Charcoal Nixture is an excellent material for growing Hyacinths in, and is clean and inoffensive to handle (see page 2 for directions).

Culture in Jardinets.—For this purpose Barr's Fertilised Fibre, Shell and Charcoal Mixture is undoubtedly the best material to use. It should be always kept moist, and when the jardinet is removed to the sitting-room the surface should be covered with fresh green carpet moss or mossy Saxifrage. Grown in jardinets, Hyacinths are charming when associated with early Spring-flowering bulbs like Chionodoxas, Scilla sibirica, Snowdrops, Tulips, Crocuses, Narcissi, Iris reticulata, etc.

Hanging Moss Balls of Hyacinths.—Very charming hanging baskets of Hyacinths can be made with balls of fresh Sphagnum moss, 9 inches in diameter. First make up a ball of moss about 8 inches in diameter, into which insert the Hyacinth bulbs all round, binding them in with tarred string and more moss so that only their points are visible. Then run a wire through by which the ball can he suspended in greenhouse or sitting-room window. No more attention will be required except to dip the ball in water about once a fortnight. Such hanging baskets can be effectively made with Named or Bedding Hyacinths, and also with Roman Hyacinths. The open wirework baskets which are sold can be filled in the same way.

# BARR'S NEW "PRIZE-WINNING" EXHIBITION HYACINTHS.

A very careful selection of a few of the finest Hyacinths for Exhibitors.

We have selected these varieties out of many hundreds, as being specially suitable for exhibition on account of their grand spikes of fine form, their large bells and beautiful colours. Several of them are new varieties, and a great advancement on existing kinds. Most of them have been awarded prizes and certificates of merit.

W indicates those sorts which should be selected where the bulbs are required for growing in glasses.

# BARR'S "Extra Selected" Named Hyacinths.

# Bulbs the Finest of the Season's Crop.

The varieties of Hyacinths described below, and included in the following selections, we have personally selected during our many visits of inspection to the Finest Hyacinth Farms in Holland, and experience has proved them the most worthy of cultivation.

For the convenience of buyers we have indicated the relative earliness or lateness of the various kinds by (1), (2), (3), (4): thus those marked (1) are the first to bloom, those marked (4) are the latest.

# BARR'S SELECTED BEDDING HYACINTHS.

For Bedding, Boxes, Bowls, or Pot-Culture.

The following Hyacinths we have specially selected after many careful trials at our Surbiton Nurseries as being the very best for bedding together or alone. The all have good-sized, well-formed spikes of distinct pure colours. We also recommend them for filling flower boxes, rustic baskets and vases, etc., and for making into hanging baskets (see page 37).

### EARLY WHITE ROMAN HYACINTH.

BARR'S EARLY WHITE ROMAN HYACINTHS GROWN IN BOWL OF PEBBLES AND WATER.

candicans. See Galtonia, page 32.

### Extra Selected French-grown Bulbs.

This charming little Hyaeinth is of great value for early forcing, and may be had in bloom during November, December, and January by successional plantings. Several bulbs in a pot make a charming Winter decoration for the greenhouse or sitting-room, while to cut for bouquets and vases the graceful spikes of sweet-scented blooms are highly prized. The Roman and Italian Hyacinths lend themselves readily to culture in bowls of pebbles and water or our fertilised fibre, shell and charcoal mixture. (For Cultural Directions, see page 2.)

# Barr's "Extra Early" BLUSH ITALIAN HYACINTH.

### ITALIAN AND FRENCH EARLY HYACINTHS.

These bloom just after the White Roman Hyacinth, and are therefore valuable for succession. They are all of graceful beauty, and may be had in bloom in December and January. They can easily be grown in bowls of **pebbles and water** or our prepared **Fibre, shell, and charcoal mixture,** and make a very pretty decoration for the greenhouse and sitting-room.

### IRISES.

These may be called the "Orchids" of the flower garden, their blossoms competing in richness and variety of colour with the choicest and the most beautiful Orchids. They should be extensively planted in flower and shrubbery borders, and naturalised; a judicious selection will give a display of bloom from Christmas to August. See our Hardy Plant Catalogue for all kinds of Flag Irises.

## BARR'S ENGLISH IRIS.-June to July-flowering.

The Finest Collection Existing.

These magnificent English Irises (I. xiphioides) thrive in any ordinary garden soil. earlier the planting, after beginning of September, the greater the success, although the bulbs may be put in as late as December. The varieties contained in our collection we have specially selected as

being the finest and most distinct, and they will be found as strikingly beautiful in colour as the most sumptuous Orchids of the hothouse, They flower from end of Junc to beginning of July, thus succeeding the Bearded Flag Irises and Spanish Irises. As cut flowers they take a first place. BARR'S SELECTIONS OF ENGLISH IRISES. 5 each of 25 magnificent varieties ..... 24 3 each of 25 5 each of 12 3 each of 12

In the following descriptions S. is used to signify Standards or the erect petals; F. Falls, or the drooping petals. The heights given are those recorded at our Nurseries, but they may differ a little according to soil, season, and climate.

The numbers following the name, indicate the relative time of flowering; thus those marked (1) open first, while those marked (4) are the latest to bloom; the difference, however, is only one of days.

GROUP OF ENGLISH IRISES (Very much reduced).

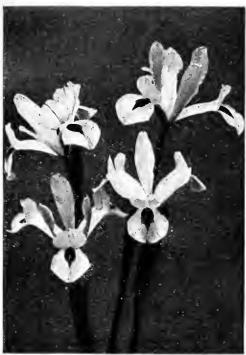

## Tall and Dwarf Flag Irises for Autumn Planting.

### BARR'S SPANISH IRIS-June-flowering.

The Finest Collection Existing.

GROUP OF SPANISH IRISES (Very much reduced).

These Spanish Irises (Iris Xiphium) flower a fortnight before the English, and differ from them considerably, the colours of the flowers being showier and more varied. The curious and charming blendings of shades in the same flower give them the appearance of many of our rare orchids, with which they can well compete in grace and beauty. For vases and bonquets the cut flowers are greatly prized, as they last long when cut, and the buds open well in water. For filling flower-beds and massing in borders these elegant Irises are of the greatest value. The varieties forming our collection are the finest and most distinct in cultivation. They are easily grown in any good light soil either in an open or partially shaded situation. They will also bear very geutle forcing in pots, but this should not be attempted until the flower buds are developing.

but this should not be attempted until the flower buds are developing.

### VARIOUS BEAUTIFUL IRISES.

### Bulbous, Tuberous, and Rhizomatous.

These Iris Species are all hardy and beautiful, flowering one after the other from November to June. The dwarf early species will be more enjoyed if planted on rockwork, where the flowers have a little protection from heavy rains. Alata, Reticulata var. Histrio and Histrioides, Vartani, and Unguicularis (Stylosa) vars. are charming Winter-flowering species, followed in February by I. reticulata, with its lovely violet-scented blossoms, the sweet-scented I. persica, Bakeriana, Danfordice, and the beautiful species I. Rosenbachiana and Sindpers. Next in succession come the interesting Bucharica, Caucasica, Grant Duffi, Orchioides, Warleyensis, Willmottiana, the curious Snakeshead Iris tuberosa, and the species I. Sindjarensis and assyriaca. These are followed closely by the Cushion Irises, with their large handsome flowers; surpassing in beauty and interest any written description that can be given of them. The pretty Peacock Iris (I. pavonia), the beautiful Iris cristata, and Iris flavissima flower in May, and are followed in June by Irises juncea, Boissieri, Insilanica, and tingitana.

CULTURE.—The Irises marked  $\Theta$  in the following list belong to the Oncoyclus and Regelia sections (Gushion Irises), and are remarkable for their great beauty. We supply dormant roots of these (which have been kept in cold storage) in early Spring, ready to plant out. Plant so that the tops are not more than  $1\frac{1}{2}$  inches below the surface, in a light loamy but thoroughly well-drained soil into which plenty of bonemeal has been worked (5 lb to the square yard); give a light covering with dry heather for a few weeks until the plants have made a few inches of top growth, when the covering should be removed. Immediately the plants have done flowering place over

IRIS ALATA.

Caterina. See Novelty List, page 7.

Immediately the plants have done flowering place over them a hand light, or panes of glass elevated eighteen inches above the ground, so as to admit at the sides a free entry of air, and at the same time to keep off rain till November; the object desired is to thoroughly ripen the roots, and prevent their starting into growth too early. Just as Winter sets in cover with three or four inches of dry heather or other light material in order to keep off heavy rains. The Oncocyclus Irises like to remain undisturbed for years. The great beauty of these Irises, especially when seen in established masses, will fully repay the little extra trouble in growing them.

The Irises marked ‡ belong to the Juno section, and thrive best planted in rich light or sandy soil with a light dressing of old manure. As they are mostly winter and early spring-flowering species give them a position protected from the early morning sun.

(Coloured Plate of the Oncocyclus Irises, Gatesii, Lorteti, and Lupina, price 6d. Coloured Plate of Irises Atrofusca, Bismarckiana, Atropurpurea, and Helenæ, price 6d.)

### BARR'S FLAG IRISES.

### Tall Bearded, Dwarf Bearded, and Japanese, etc.

These beautiful Irises form a great feature in our cultures. They supply a floral decoration from March to July, and are the most rich and varied in colour of hardy plants; the best time to plant is in early Autumn. For full descriptive list, see our HARDY PLANT CATALOGUE.

### IXIA.—The African Corn Lily.

A most graceful plant, bearing on wiry stems 15 to 21 inches high long loose racemes of bloom of remarkably rich and varied colours. All have a brilliant dark centre, and in the sun's rays present a picture of gorgeous beauty.

CULTURE IN POTS.—From October to January plant five or six bulbs in a four- or five-inch pot, using a compost of turfy loam, leaf soil, and silver sand. Make the soil firm about the bulbs, and plunge the pots, up to the rim only, in ashes in a cold pit or frame, or under a south wall. Until a little top growth has been made no water should be given, and then only sparingly at first. When the plants are in growth, the lights should be left off except during wet or frosty weather. Early in February, or when sufficient growth has been made, remove the plants to the greenhouse, keep close to the glass, and carefully attend to the watering.

CULTURE OUTDOORS.—Plant from November to January, at a depth of three inches, and the bulbs two inches apart, on raised beds, in a prepared light loamy soil, in a sunny situation, protected if possible from cold east and northerly winds. When planting cover the bulbs with coarse sand. A covering of straw, litter, heather, or other light material will protect the early top growth from frosty winds, but it should be removed in March.

### LEUCOJUM (Snowflake). (Spring, Summer, & Autumn-Flowering.)

Leucojum vernum, the Spring Snowflake, is one of the earliest and most heautiful Spring flowers, handsome in outline and of elegant drooping habit. L. astivum and Hernandezii, the Summer Snowflakes, flower in April and May, and their elegant blossoms are prized for bouquets. L. autumnale and roseum are charming little graceful Snowflakes, blooming in August and Septemher; they are best planted in pure sand. L. trichophyllum resembles autumnale in its graceful flowers, but blooms in Spring; plant in pure sand, and give cold frame treatment, keeping it well moist while in growth. All the Snowflakes delight in shady situations.

autumnale (Acis), white and pink flowers in Autumn, graceful in pots and on rockwork, etc., ht. 4 in.; grow in pure sand in shade; quite hardy

pcr 100, 7/6; per doz. 1/3 **trichophyllum** (Acis), pure white, a rare and very beautiful Spring-flowering species; grow in moist sand, give cold frame or cool greenhouse treatment

### BARR'S BEAUTIFUL LILIES,

# For Naturalising in Flower and Shrubbery Borders, and for Greenhouse Decoration.

For chasteness and beauty of colour and form, the **Lily** stands pre-cininent amongst hardy plants, and by a judicious selection of species a continuous display of bloom can be maintained in the flower garden or greenhouse from May to October. In the flower or shrubbery border they are most effective when planted in bold groups, while isolated clumps on lawns of the taller-growing Lilies produce a fine effect. The flowers are greatly prized for cutting, as they mix well with other plants and remain fresh in water a long time.

Many amateurs have feared to introduce into their gardens these beautiful flowers, imagining that their culture was too difficult, and beyond them. This, however, is not so. There are varieties which are of the simplest culture, such as Speciosum, Tigrinum, Elegans, Umbellatum, and the old Cottage Garden Lilies—Candidum and Croceum. Others require only a little attention as to soil and position, which can be arranged for in most gardens.

General Hints on Culture.

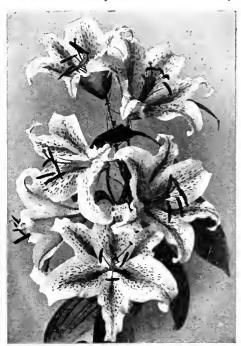

Lilics planted out-doors.—The conditions essential to success in growing Lilies may be generally summarised thus:—A cool rooting medium; Perfect drainage; and Shade from hot sun.

These conditions can be readily fulfilled in the borders of Rhododendron and Azalea beds, or amongst the various subjects grown in the herbaceous and shrubbery border. In such positions the young Spring growths are protected from cold winds, and the ground is kept shaded and cool by the shade of the surrounding plants. This is especially needful in the case of those Lilies which make stem roots, as these are only developed freely in shade. On these roots, which are produced at the base of the stem, the flower-head largely depends for its successful development, and the bulb for its preservation. As soon as they appear a light covering of good rich soil should be given, into which they can root freely. The chief stem-rooting Lilies are indicated in the following list thus  $\delta$ . There are others which are less dependent on these stem roots, which they only produce when the bulbs are planted on rich soil and in shade.

In preparing the ground for Lilies loosen the soil to a depth of 2 feet or more, and add or fill in the necessary compost (see notes below). Plant the bulbs 2 to 3 inches deep, surrounding and covering them with sand, and then top-dress with a compost of light soil and well-decayed manure, working in pieces of burnt or charred wood. As growth advances a mulching of light rich soil should be occasionally given, and during the growing period the plants should be freely watered. In late autumn cut down the old flower-stems and give a light covering of leaves or cocoa fibre.

#### LILIES-CULTURAL NOTES-continued.

The Bog or Swamp Lilies—like Superbum, Canadense, and Pardalinum—revel in plenty of moisture and are admirable subjects for the sides of brooks, rivulets, ponds, etc.

LILIUM AURATUM.

Lilies in Pots.—Any one with an unheated greenhouse can easily have a very beautiful show of Lilies in pots during the summer months. The varieties specially recommended for this culture are Auratum, Speciosum, Tigrinum, Chalcedonicum, Umbellatum, Elegans, Testaceum, Hansoni, Henryi, Giganteum, Brownii, Brownii var. odorum, Longiflorum, Krameri, and Rubellum.

In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand; add also to the compost a few pieces of charcoal. See that the drainage is perfect. The pots should be carefully washed out with boiling water and wiped dry before using; never use dirty or wet pots. We also recommend sterilising the soil, for directions see page 1. Pot firmly, barely covering the top of the bulb, and leaving room to add more soil when the surface roots appear. Select a situation out of doors, protected from the afternoon sun, and stand the pots on a bed of ashes raised above the general level to avoid stagnant moisture, and make firm to prevent the entrance of worms; then cover with 6 inches of cocoa-fibre or old leaf soil to keep off excessive rains. When top growth begins to show above the covering, remove the pots to a cold frame, pit, or greenhouse, and start giving water sparingly; a little clear weak liquid manure given twice a week when the flower-buds are well advanced will greatly assist in the development of fine blooms. A north wall or hedge is a suitable situation for starting the bulbs. If very early flowers are required the plants may be transferred from the cold frame into a gentle heat, but must be kept as near the glass as possible

to prevent their getting drawn. Shade should be given to the lower portion of the stems to induce free stem-roots, and these should be top dressed as they appear. Give air freely, and fumigate if required. When coming into bloom a little weak manure-water will be of great assistance to the plants.

To those desiring further information regarding Lilies, we commend the following books: Dr. Wallace's "Notes on Lilies" (2/9 fost-free), Miss Jekyll's "Lilies for English Gardens" (8/10 fost-free), "The Book of the Lily" (by William Goldring), 2/9 fost-free; also Vol. XXVI. of the Royal Horticultural Society's Journal containing a report of the Great Lily Conference at Chiswick, July 16, 1901.

The majority of Lilies are not ready for dispatch before the beginning of November; a few sorts, however, are ready earlier, such as Candidum, Croceum, longiflorum, etc., while some of the Japanese imported varieties do not arrive until December. Orders for Lilies will therefore be executed, if necessary, in two or more parts.

#### Soils and Situations Recommended for Different Lilies

|| Indicates those Lilics of easiest culture, being strong free growers thriving in most soils. Where soil is very dry and poor, add loam and peat, or leaf soil; where heavy and damp, add sand and leaf soil. All require good drainage and plenty of moisture while in growth.

 $\Omega$  Indicates those Lilies requiring a good friable soil, not too dry, and the addition of a little peat is advisable. The lower part of the stems should be kept in shade.

¶ Indicates those Lilies delighting in shady and moist situations, sheltered from strong winds. A well-drained peat soil, where there is bottom moisture for the bulbs to root into, is recommended. Where a brook, stream, or pond is available, they may be planted at the margins, where the bulbs can remain moderately damp, and the roots find all the moisture they require below. In planting cover and surround bulbs with sand.

δ Indicates the chief stem-rooting Lilies.

N.B.—For the interest of buyers we have added, after the name, the plant's native country.

LILIES-continued.

δΩ Auratum (The White Golden-rayed Crimson-spotted Hill Lily of Japan), ht. 4 to 6 ft. This is indeed the Queen of Lilies, and should have a place in every garden and greenhouse. It commences to bloom in August and continues on into September. It is of simplest culture and perfectly hardy. Those who have beds or borders of Rhododendrons should plant this grand Lily freely amongst them for a succession of bloom. Growing amongst Pæonies, and along the margins of evergreens, groups of L. auratum (6 to 12 bulbs in a clump, planted 9 inches apart), produce a grand effect. As isolated subjects on large lawns, groups of Lilium auratum look very handsome and stately. A situation should be chosen where the plants are sheltered from cutting winds and screened from the midday sun; on slopes, in a free soil, moist but not wet, this Lily does well, and makes a fine effect.

We are expecting our first consignment of this beautiful Lily to arrive early in December from Japan, and we are booking orders for delivery immediately on arrival, at the following prices, The larger-sized bulbs produce the most flowers.

$\delta\Omega$	<b>Auratum</b>	Extra Large Bulbs, per doz. 15/-; per 100, 10	5/-

**Giganteum* (The Himalayas), the most majestic of Lilies, attaining a height, when established, of 10 to 12 ft., with large handsome heart-shaped leaves, and bearing from July to August immense long white trumpet-shaped flowers. Groups of this noble Lily in large herbaceous and shrubbery borders, woodlands, or wild gardens produce a grand effect. They should be planted in a half shady position, where they can establish themselves. The large flowering bulbs should be potted up and plunged in a cold frame and then be planted out in May, slight protection from early morning frosts being given. If foliage is made late in the season, after flowering, it must be protected during the winter with straw. The smaller bulbs are specially recommended for naturalising, and will bloom freed two or three years after planting. Monster flowering bulbs	15 5 2	o 6 6

Extra Large Bulbs

### XLILY OF THE VALLEY,

## For forcing, and making plantations out of doors.

FORTIN'S GIANT LILY OF THE VALLEY.

The Berlin Forcing Crowns offered below we recommend for general forcing, to come in after Christmas. For flowering before and at Christmas the Retarded Crowns should be used. For outdoor culture the Planting Crowns are recommended.

#### DIRECTIONS FOR FORCING.

Plant 15 to 20 crowns in a 5-inch pot, shaking in a little light soil amongst the roots, until they are tightly potted; leave the crowns free above the soil and a little below the rim of the pot. Place on bottom heat in a moist atmosphere, with a temperature of 80 to 85 degrees (if forced in March a temperature of 70 to 75 degrees will be sufficient), and cover the crowns with a little cocoa fibre or moss, which remove when top growth is showing. Tepid water should be frequently given, care being taken that it penetrates to the centre of the clump. To encourage simultaneously the development of flower and foliage, keep a flower-pot inverted over the crowns, until flower and foliage have made some progress, when gradually admit light. A dry atmosphere, or an insufficient supply of water at the roots, will cause the crowns, technically speaking, to go "blind." Where large quantities of Lily of the Valley blooms are required for cutting, the crowns should be planted rather thickly in boxes and receive the treatment described above.

#### OUTDOOR CULTURE OF LILY OF THE VALLEY.

Out-of-doors the Lily of the Valley likes a partially shaded and moist situation. The best results are obtained on a shady border against a wall, placing the crowns 6 to 9 inches apart and leaving them to establish themselves. The soil should be a good loam enriched with manure and a top dressing of old manure should be given annually. The plants should not be allowed to remain more than three years in one spot.

x Barr's Finest Berlin Forcing Crowns, of finest selected quality, suitable for general 

× Barr's Improved English "Alexandra" Crowns, bearing sturdy spikes well elothed with large handsome bells; this strain is specially suited for outdoor culture, but may also be potted and very slowly forced in February or March (not earlier)......per 100, 8/6; per doz. 1/3 x Fine Selected Berlin Planting Crowns, for outdoor beds and naturalising in

woods, etc.....per 1000, 42/-; per 100, 4/6

x Strong selected clumps, for outdoor planting or slow forcing in pots.

per doz. 10/6; each 1/-× Fortin Grand Giant Strain, a very beautiful strain with remarkably large handsome bells

on long sturdy stalks; the finest of all Lily of the Valley. The flowering crowns offered may be potted and brought on very slowly under glass, but they must not be potted or boxed up before February; ordinary forcing will cause them to go blind. Flowering crowns, per 100, 17/6; per doz. 2/6 Planting crowns (specially recommended for planting in beds and borders) ....... 1/9

# RETARDED LILY OF THE VALLEY,

### Suitable to force for Autumn, Winter and Summer flowering.

Crowns supplied from July to December and March to June.

The earlier plantings of the Berlin Retarded Crowns will give bloom in about three weeks, but the crowns started in November and December require a little more time. It is necessary that they be planted as soon as received, and grown on rapidly without any check. In June, July, and August all that is needed is to place them in a cold frame, and they come along quickly with very little attention. Later on however, when the nights become cool, the temperature must be raised to that of the day. Failures sometimes occur with these retarded crowns in October, November, and December because they are not given the warmth they require at night.

The plants should be kept fairly dry overhead, and a warm moist atmosphere should be maintained. As the retarded crowns make a vigorous foliage it is advisable to remove one out of three leaves,

as this will assist the development of the flower spike,

The Fortin's Giant Retarded Crowns take a few days longer to develop their flowers than the Berlin Retarded Crowns.

Finest Berlin Retarded Crowns, supplied as required all the year round...per 100, 7/6 Finest Selected Fortin's Giant Retarded Crowns, supplied as required from September to December and March to June ......per 100, 21/-

## NARCISSUS POLYANTHUS, or NOSEGAY DAFFODILS.

POLYANTHUS NARCISSUS PAPER-WHITE "SNOWFLAKE,"

The Polyanthus Narcissi or Nosegay Daffodils produce large heads of sweet-scented flowers, and are specially adapted for Winter and Spring decoration in pots and jardinets, etc. The culture is the same as for Hyacinths. For flower beds and mixed borders they are great favourites, and produce a charming effect. Plant from September to November, and at the approach of winter give a light covering of long litter or other material to keep off severe frosts; remove the covering in March. The earlier plantings give the best results.

Where flowers are in demand from November to January, the Paper White "Early Snow-flake" and Double Roman Narcissi are of great value for forcing with the Roman Hyacinths (see Culture, page 1).

### NARCISSUS POETAZ-NEW HYBRID POLYANTHUS NARCISSI.

(Hybrids of Polyanthus Narcissi, Narcissus poeticus ornatus).

A very decorative new class of Nosegay Daffodils or Polyanthus Narcissi, growing taller than the old varieties, with a less stiff habit, and a looser head of flowers, which are larger and more elegantly formed. They also have the merit of being hardy, and may be naturalised like the true Daffodils. Besides being good border plants they are valuable for culture in pots and jardinets, and will bear gentle forcing. The flowers of these new Narcissi are all delightfully fragrant, and will be found of great value for vases or bouquets.

## THE SACRED, OR GOOD LUCK LILY of China and Japan.

Called by the Chinese "Jos Flower," or "Flower of the Gods," and "Water Fairy Flower."

THE CHINESE SACRED LILY GROWING IN BARR'S DOULTON-WARE BULB VASE.

This species of Polyanthus Narcissus, which we annually import from Northern China, is prized for the abundance of its flowers and its marvellously rapid growth. The flowers are white, with yellow cup, and very fragrant; they are mostly single, but a few doubles are sometimes found amongst them. Each bulb produces several flower-spikes, bearing many flowers. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water, and the natives compete with one another in growing the finest specimens for their New Year's Festival, successful culture being regarded as an emblem of "Good Luck." The bulb in this country can be grown as successfully as in China, in pebbles and water or fertilised fibre mixture (see page 92) and it is most interesting to watch its rapid growth, which is about 20 inches in forty days; place in a sunny window by day and on a table near the centre of the room by night, as frost destroys the flower-buds. The natural atmosphere of a warm greenhouse is of course most suitable, and we can strongly recommend this flower for Christmas Forcing. Fuller particulars of culture sent with the bulbs. In Cornwall and the warmer parts of the South of England the bulbs after blooming may be planted out to a sunny corner of the garden and covered with heather until the spring;

they should there be left to establish themselves, and if protected slightly each winter, give an abundance of early flowers.

#### PRIMROSES-JAPANESE-Varieties of Primula Sieboldii.

A charming hardy class of Primulas, bearing large hold heads of graceful flowers, in colour ranging from pure white, blush-pink, and soft rose to the most intense crimson, delicate mauve, and lavender-blue. They thrive in any shady sheltered border or shady parts of the rock-garden, and as pot plants for the cool greenhouse have few rivals in the spring and early summer months.

PUSCHKINIA libanotica compacta (Lebanon Squill), a beautiful little April-flowering bulb, prized for the permanent flower border and for rockwork; it is also a lovely indoor pot-plant (6 bulbs in a pot); the flowers are white, shaded and striped soft clear blue, ht. 6 inches per 1000, 35/-; per 100, 4/-; per doz. 7d.

RAMONDIA pyrenaica alba. See Novelty List, page 8.

#### RANUNCULUS, Turco-Persian, Turban and Persian, ht. 3 ft.

Nothing produces a brighter or more gorgeous effect in May and June than beds of Ranunculus; the flowers are all good for cutting, and the culture is very simple. They thrive in any ordinary garden soil, but should have protection in spring from sharp winds.

CULTURE.—Plant the **Double Turban Ranunculi** from November to March (the earlier the better), and the **Turco-Persian** and **Persian** during February and March. Set the tubers 3 or 4 inches apart, pressing them firmly into the soil, claws downwards, and covering them with sand, then with soil; keep the crown of the tuber two inches under the surface. After planting cover the ground with cut heather, or other light material, which remove when the plants appear above ground. In April a slight mulching of well-decayed manure will be found beneficial, and during dry weather the plants should be given abundance of water. If grown as pot-plants put three tubers in a 4-inch pot, and plunge out of doors for a time.

#### RANUNCULUS, Double Turban or Turkish for Bedding.

The flowers of the **Turban Ranunculus** are large, rose-like, and self-coloured. In beds, ribbons, and masses in the borders, the rich *yellow*, bright *orange*, brilliant *scarlet*, beautiful *rose-carmine*, and pure *white* flowers are very effective in spring.

per 1000, 21/-; pcr 100, 2/3  RANUNCULUS—Single Scarlet from Palestine, a beautiful variety found wild in Palestine; flowers single, brilliant vermilion to orange-searlet, with prettily crinkled petals and a black central boss; a very showy plant for flower beds and borders. Plant out of doors in February or March, or the roots may be potted up earlier and gently forced per 100, 7/6; per doz. 1/3		
RICHARDIA (Calla or Arum Lily), a charming family of greenhouse plants. R. africana (Æthiopica) is much prized for its beautiful large white flowers; this and its varieties should be grown out of doors during Summer and be brought into the greenhouse at the approach of Winter. The other species should be kept dry, away from frost during Winter, and be started in a gentle bottom heat in February or March. They may then be grown on in pots for greenhouse decoration or planted out of doors in a sheltered position in May. In the latter case the natural soil should be taken out to a depth of 9 inches, and be replaced by a very rich compost, as these plants are gross feeders. Abundance of water should be given as growth proceeds. Albo-maculata, hastata and Mrs. Roosevelt may also be planted out of doors in a dry state in April for Summer-flowering.

         (S) Any other species in commerce not enumerated above can be supplied if wanted.
SCILLAS (Wood Hyacinths) -- May-flowering. Our native species (Scilla nutans),
    with its long pendent bells, abounds in most parts of the country, and many suppose it to be the
    "Culver keys" referred to by Izaak Walton. The fine Spanish varieties (S. hispanica) have
    erect flower-spikes and open campannlate flowers. Scilla patula and its varietics have a robust
    tall habit with large campanulate open flowers. All are very effective in flower and shrubbery
    borders, and most valuable for wild gardens and woodlands, where they should be largely
    naturalised; they seed freely and quickly establish themselves. They also make charming pot-
    plants, and may be forced into bloom by March. The white varieties are greatly in demand to
    cut for table bouquets and vases. Wood Hyacinths succeed in shady flower borders and bare
    shady places, and odd corners which often have a descrt-like appearance in the flower garden can
    by their use be rendered bright and cheerful. They will also thrive under fir and pine trees,
    where few other plants will grow. Plant 6 inches deep to obtain fine flower-spikes.
  Hispanica (syn. Campanulata), plants of erect habit, with spikes of open campanu-
                                                                                        p. 100 p. doz.

#### imesSPIRÆA (The Meadow Sweet), for Forcing or Planting Out.

SPIRÆA JAPONICA.

STARCH HYACINTH. See Muscari, page 63.

TECOPHILÆA cyanocrocus (Chilian Crocus), a most beautiful Chilian Spring-flowering bulb, bearing large Crocus-like flowers ranging from dark to light blue with white throat, delicately scented, ht. ½ ft. It is easily grown in the south of England and mild districts in a deep sandy loam well drained, and exposed to full sun. In cold districts the bulbs should be given a cold frame treatment but no artificial heat. When established, it blooms freely each year. Plant the bulbs in October ..... THALICTRUM Delavayi, a lovely new Meadow Rue from China, with dwarf Maidenhair-Fern-like foliage, from which rise slender spikes with panicles of soft lilac-blue flowers, ht. 2 fr. Award of Merit R.H.S.

The large graceful feathery pure white fragrant flowers of Spiræa japonica, com-pacta multiflora, and Astilboides are most valuable for furnishing vases, while the plants are amongst the most decorative for the greenhouse and sitting-room. In forcing, a moist atmosphere and abundance of water at the roots are necessary. The pots therefore should be stood in saucers of water. Spiræa palmata and its varieties are very beautiful. In shady or moist borders out of doors, and at the margin of streams and ponds, the Spiræas are all very decorative plants.

13 The Spiræas we offer are all strong clumps.

japonica (syn. Astilbe japonica), white, ht. 2 ft. per doz. 6/6 o 7 compacta multiflora, dwarf and compact, with large dense white flower-spikes, ht. 12 ft. per doz. 6/6 palmata (syn. digitata), large clusters of rose-crimson flowers, ht. 2 ft....... 6/6 alba, large spreading plumes of snow-white flowers, beautiful, ht. 13 ft. ... elegans, plumes of beautiful pale pink flowers, ht. 21 ft. ..... aruncus Kneiffii, a graceful variety of the Goat's Beard, with finely divided foliage and plumes of dainty white flowers, ht. 2 ft. .... astilboides, a lovely species, bearing dense drooping plumes of graceful snowy white flowers, ht. 2 ft. .....per doz. 5/6 floribunda, lovely panicles of feathery white flowers in great profusion, lit. 21 in.....per doz. 5/6 Gladstone, a very fine variety with handsome plumes of white flowers, ht. 2 ft. .....per doz. 7/6 longifolia, a remarkably elegant and decorative plant, bearing on long graceful stems elegant arching plumes of white flowers, one of the best, ht. 2½ ft. ..... per doz. 7/6 Peach Blossom and Queen Alexandra, see Novelty List, page 8. (3) For other Herbaceous and Shrubby Spiraeas, see our Hardy Plant Catalogue. STERNBERGIA (The Lily of the Field). These charming bulbous plants require a warm sunny aspect and a good deep light soil, and should be left to establish themselves; plant Sedums over them, or cover in winter with dry litter. On limestone soils they are most at home. Planted under Fir and Beech trees with a genial aspect they also do well. Fischeriana, a handsome new form from Asia Minor, producing its clear yellow flowers in early Spring; suitable for sunny spots in the rock garden or for pot culture ...per doz. 3/6 Extra Strong Bulbs lutea major (sym. angustifolia), one of the most effective and showy of Autumnflowering bulbous plants. Bulbs planted in August produce within a few weeks very large handsome crocus-like flowers of a rich golden-yellow. It succeeds in a deep soil and sheltered situation planted 6 inches deep. Planted in bowls of cocoanut fibre and charcoal or in pebbles and water it makes a charming room decoration. AWARD OF MERIT R.H.S., Sept. 18th, 1904. ..... per 100, 7/6; per doz. 1/3 ,, 10/6: Monster Bulbs lutea minor, a dainty small-flowered variety producing freely golden-yellow flowers, macrantha, having very large canary-yellow flowers in Autumn, blooming a little later than S. lutea major, shorter stemmed and with greyish green foliage ... per 100, 10/6; per doz. 1/6

each-s. d \* THLADIANTHA dubia, a rapid-growing climber for covering trellises, arbours, etc., with heart-shaped bright green leaves and bright yellow flowers during Summer......per doz. 3/- o 4 \* TIGRIDIA Pavonia (The Tiger Flower of Mexico).

Few flowers are more gorgcously coloured or so beautiful. The bulbs are supplied from December to May; for greenhouse decoration, pot up as soon as received and plunge in a cold frame, with-holding water till the foliage appears, then giving sparingly at first. Those hulbs intended for outdoors should be stored in soil or peat (not quite dry) away from frost, till March, and then be planted in sunny positions in the flower border in welldrained soil, the bulbs being surrounded with sand. Beds of Tigridias make a gorgeous picture during July, August, and September, and should find a place in all gardens.

## BARR'S FAMOUS TULIPS.

AWARDED

### Six Gold Medals by the Royal National Tulip Society, and many other High Awards at the London Spring Flower Shows.

Tulips are extremely hardy, and of easy culture, flowering freely in either sunny or shady situations. and developing their handsome showy flowers even in a confined town garden. By a judicious selection of Single, Double, and May-flowering Tulips, a most brilliant display of colours may be maintained in the garden from early April to end of May. In gardens where the flower beds must be kept gay from the carliest dawn of Spring, plant between the Tulips, Scilla sibirica, Chionodoxas, Snowdrops, and Crocuses; these flower first, and when out of bloom the leaves form a charming green groundwork for the blossoms of the Tulip. Our large breadths of Tulips at the Surbiton Nurseries in Spring create much comment, and clicit the greatest admiration from all who see them. See Illustration on back cover.

BARR'S EARLY SINGLE TULIPS. **Bulbs of Extra Quality.** 

Those alone who have massed the different varieties of SINGLE TULIPS (planting the bulbs 4 inches apart) can form an idea of their great beauty and rich diversity in shade and colour, and the grand effect they produce grouped in flower beds or borders. The Single Tulip is extensively grown for indoor decoration (three or five bulbs in a pot) and cultivated in the same way as the Hyacinth for early flowering and succession.

The varieties of the little early Duc Yan Thol Tulips (with exception of the scarlet, edged yellow variety, which flowers first) bloom together, and are of the same height, which renders them valuable for beds and borders, where a very early Spring display is required, also for early forcing with the Roman

Hyacinth, etc.

Hints as to the arrangement of Early Tulips in beds, etc.—A difficulty is often experienced by Amateurs in knowing what kind of Tulips to select to bed together, seeing that they are not all the same height, and that some are earlier in flower than others. For the assistance, therefore, of purchasers we have taken special observations at our Nurseries as to the heights and the order in which the Early Single and Double Tulips flower.

Culture Outdoors.—Any ordinary garden soil enriched with old stable manure, with a sprinkling of quicklime dug in while fresh, suits the Tulip. Planting out of doors should take place from October to November, not carlier. On light soils the bulbs should be planted 4 to 5 inches deep; on heavy soils

3 to 4 inches deep.

Arrangement of Colours in Bedding.—The following varieties if bedded together produce charming effects: Princess Marianne, Ophir d'Or and Wouverman; Pottebakker White and Chrysolora; Prince of Austria, President Lincoln and Chrysolora; Rose Grisdelin and Princess Marianne; Pottebakker Yellow and Thomas Moore; Chrysolora and Dusart; Princess Ida and Rosamundi; Duchesse de Parma and Fabiola; Rosamundi and Stanley; Couleur Cardinal makes a grand show bedded by itself, but Snowdrift goes well with it; Keizerskroon makes a fine bed with Queen Victoria as an outside border. Golden Queen is a grand bedder.

Time of Flowering.—The order of flowering is indicated by (1), (2), (3), (4), or (5) after the name. It will be noticed that the **Double Tulips** generally are a little later flowering than the Singles. The

#### TULIPS, EARLY SINGLE-continuea.

difference in time of flowering between each number is not great, so that (1) and (2) may be bedded together, also (2) and (3), and so on. The varieties of **Duc Yan Thol** are not numbered, as they flower before any of the others.

Varieties Suitable for Forcing.—The following varieties only should be used for this purpose:

- (1) To bloom at Christmas and early January.—Duc Van Thol varieties, Mon Trésor, Pottebakker White, Proserpine, and Vermilion Brilliant.
- (2) To bloom from end of January to early March.—Duchesse de Parma, Golden Queen, Jost Van Vondel, La Belle Alliance, Pottebakker White, Primrose Queen, Prince of Austria, Queen Victoria (La Reine), Rose Grisdelin, Rose Hawk, Thomas Moore, Vermilion Brilliant, and Yellow Prince.
- (3) For later forcing, to come in from middle of March to early April.—Couleur Cardinal, Duchesse de Parma, Joset Van Vondel, Keizerskroon, La Belle Alliance, Pottebakker White, Pottebakker Yellow, Prince of Austria, Prince de Ligne, Rosamundi, Rose Grisdelin, Rose Luisante, Stanley, Vermilion Brilliant, White Swan, and White Falcon.
  - For general directions for treatment of bulbs in pots, see page 1.

#### BARR'S DOUBLE TULIPS.

# Bulbs of Extra Quality. Plant from October to November.

**Double Tulips** have massive flowers of brilliant and beautifully diversified colours, and are very effective in beds on lawns, terraces, etc., also as edgings to beds of Roses and Rhododendrons and to shrubberies. Planted in groups of five or more, they are very attractive. Plant the bulbs four inches deep and four to six inches apart.

Time of Flowering.—The numbers in brackets after the name indicate the order of flowering, and will assist amateurs in making their selections for bedding, thus:—(1) corresponds in time of flowering with (1) of the Single Tulips; (2) corresponds with (2) of the Single Tulips, and so on. The heights, as registered at our Nurseries, are given in inches. By a judicious selection of Double and Single Tulips, a display of brilliant colours may be maintained in the garden for a long period.

**Double Tulips** should be planted three bulbs in a pot, and receive the cultural treatment recommended a page 1.

#### DOUBLE TULIPS SUITABLE FOR FORCING.

To force for earliest decoration, say January, Salvator Rosa may be used; the other varieties do not force successfully so early.

For decoration from the end of January to early March we can recommend the following sorts:—
Couronne d'Or, El Torcador, Imperator Rubrorum, Lady Palmerston, Murillo, Princess Beatrice, Tournesol,
Tournesol Yellow, and Titian.

For late forcing, to produce blooms from end of March to early April the following kinds should be grown:—Couronne d'Or, Imperator Rubrorum, La Candeur, Le Matador, Murillo, Tournesol, and Tournesol Yellow.

### PARROT, or DRAGON TULIPS, with Laciniated Petals (May-flowering).

These Parrot, or Dragon Tulips, have large characteristic blossoms with curiously laciniated petals, and richly varied shades of beautiful colours in the same flower. They are very remarkable and exceedingly showy and effective in flower borders, while if grown in hanging baskets the drooping flowers look like orchids. In height they average about 15 inches, and bloom with the Cottage and Darwin Tulips.

The following are all selected extra strong bulbs, superior to what are often sold, and may reasonably be expected to bloom; but as in some seasons the Parrot Tulips are rather shy in flowering, to ensure a good display in flower beds and borders it is wise to plant the bulbs only 4 inches apart.

#### 12 bulbs each of 6 beautiful varieties, 7s.; 6 each, 3s. 9d.

Leaflet, with full particulars and many hints on the management of Lawns, sent on application.

#### BARR'S

# Beautiful "Cottage" Tulips and Tulip Species.

All Single and mostly May-Flowering.

See Illustration on back cover of Catalogue.

Extract from the "Gardener's Chronicle," May 30th, 1908: "Messrs. BARR & Sons had a very extensive and comprehensive group which included choice alpine and herbaceous plants and perhaps one of the most gorgeous displays of Tulips ever seen at a Temple Show."

The name Cottage Tulips we have given to the various beautiful May-flowering Tulips which have mostly been found growing in old cottage gardens in England, Scotland, and Ireland, where they have been in some eases for over fifty years. Some have also been traced to old French gardens. They are all very beautiful, presenting a great variety in form and colouring, and having none of the stiffness of other Tulips. On account of their extreme hardiness they are specially adapted for permanent hardy flower borders, where they should be freely planted in large elumps and masses. They may also be naturalised in grass, wild gardens, etc., where during May they present a charming picture. Those who have visited Kew Gardens in Spring will have noticed these Tulips planted freely in grass, and also used largely in filling flower b-ds on the lawns.

The bulbs should be planted 5 to 6 inches deep on heavy soils, and 6 to 7 inches deep on light soils.

For cutting, the flowers of these "Cottage" Tulips are highly prized, as the flowers are of elegant outline and have long stems; a free and graceful effect can be readily obtained by their use.

In most eases we give the heights as registered at our Surbiton Nurseries, but these will vary

somewhat according to richness or poverty of soil.

Time of Flowering.—The Cottage Tulips take up the succession of flowering as the Early Single and Double Tulips are going out of bloom. As far as possible we have indicated the order of flowering by (1), (2), and so on. (1) will correspond in time of flowering with (5) of the Early Single and Double Tulips. The Parrot Tulips bloom together with those marked (2), and the Darwin with those marked (3) and (4) in the following lists.

Those Tulips marked  $\Phi$  are species, and gems for sunny sheltered nooks in the rock garden, where their lovely flowers will delight the eyes of all who see them. They should be planted 3 to 6 inches deep in light sandy well-drained soil.

### BARR'S GRAND DARWIN TULIPS.

#### All Single and May-flowering.

As grown at our Surbiton Nureeries, and exhibited at the London May Flower Shows, where their grand etately flowers elicit the admiration of all. On May 20th, 1908, our exhibit of these was awarded the Royal Botanic Society's Gold Medal.

See Illustration on back cover.

For flower beds and borders we confidently recommend the following **Darwin Tulips** for their stately bearing and rich colours. They have been specially selected as being distinct, showy, and beautiful, so that buyers need have no hesitation in choosing the colours they require, as all are good. The cut flowers form an elegant decoration for vases, and last a long time in water. The lighter filac and heliotrope coloured varieties blend charmingly with yellow "Cottage" Tulips such as Mrs. Moon, Vitellina, Gesneriana lutea and lutea pallida, flava, etc.

By gentle forcing in pots these grand Tulips may be had in bloom by March, and will be found of great value for indoor decoration on account of their lovely soft colours and tall stately bearing. The centres of many are most beautifully marked.

In most cases we give the heights as registered at our Nurseries last Spring, also the order of flowering in relation to the flowering period of the **Gottage Tulips**, (1) being the first to open and (5) the latest.

# BARR'S "Gold Medal" ENGLISH FLORIST TULIPS. Awarded Six Gold Medals by the Royal National Tulip Society.

These beautiful May-flowering English Tulips have been prized by all lovers of the true Florist's Flower for over a century, although of late years the number of growers has diminished. The flowers are of perfect goblet form, and their beautiful and symmetrical markings quite unique.

CULTURE OF ENGLISH TULIPS.—Any good loamy garden soil suits the "English Tulip." The bulbs should be planted four inches deep and four inches apart, from the end of October to early in November, choosing a day when the ground is in nice friable condition; avoid planting when the ground is wet.

HINTS TO EXILIBITORS AND TULIP AMATEURS.—As the English Tulip often suffers much from hail and wind during Spring, it is a good plan, when choice named sorts are grown, to erect over the bed a skeleton framework on which a covering of calico or white canvas is fastened in February or March, leaving the sides open till the buds show colour, when the covering may be brought down over the sides too. By this means hail, rain, and very hot drying sun are kept off, and the flowers open in all their purity, while the period of flowering is prolonged by some weeks.

To those who wish to know all about the English Tulip, we recommend "The English Tulip," a little pamphlet containing the lectures delivered on this flower at the great Tulip Conference of the Royal National Tulip Society, held at Royal Botanic Society's Gardens, May 12th, 1897, price 1s.

#### BARR'S ENGLISH MAY-FLOWERING TULIPS.

In the above collections the **Bizarres** embrace the following colours,—self shades of red, crimson, scarlet, maroon, and chestnut; also flakings of orange, scarlet crimson, brown, and black, on a lemon or golden-yellow ground. The **Bybloemens** are made up of self shades of purple, violet, lilac, and heliotrope, all with a dazzling white centre; also beautiful flakings of black, violet, purple, and lavender, on a clear white ground. The **Roses** contain lovely self shades of rose and rose-scarlet; also pretty flakings of delicate pink, soft rose, glowing scarlet, and deep crimson on a pure white ground.

ENGLISH FLORIST TULIPS-continued. Barr's Choice Mixture of Beautiful English Florist Tulips, in great variety, comprising Bizarres, Byblomens, and Roses. USEFUL TOOLS FOR BULB PLANTING, Etc.	

Barr's Special Bulb Planter, specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf, which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have

been put in, it being only necessary to remove a little of the soil from the bottom of the sod. A time must be chosen for planting when the ground has become softened after early Autumn rains, and not when in a hard and baked condition, as it is then impossible to use this, or indeed any other, tool with success. By the use of

BARK'S SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3\frac{1}{2} lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge.

Supplied in 3 sizes of cup: -To cut out a circular hole 2 inches diameter 21, ,, ,, 10,6 each 

We shall send the medium size  $(2\frac{1}{4})$  in.) if no instructions to the contrary are given.

Barr's Special Bulb Dibber, specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 63 lbs., length 36 inches over all. 9/6 each.

New Pattern Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring when

Daffodils are just showing; also a useful weeding tool. With 3 ft. handle (41 in hes over all and weight under I lb.), 1/9 each, with short handle (12\frac{1}{2} inches), 1/3 each.

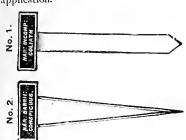

Barr's Special Bulb Trowel, male of best steel,

specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

Garden Trowel, solid cast steel, finest quality, 5 in., 1/2; 6 in, 1/3; 7 in., 1/6 each.

For a fuller list of Tools and other Garden Requisites, see Barr's Seed Guide, free on application.

# BARR'S SPECIAL METAL LABELS FOR BULBS, Etc. With Raised Lettering.

**No. 1,** with solid metal shank, about 9 inches long. We specially recommend this for beds and borders. 4d. each.

No. 2, with stout wire stem, 6 or 9 inches long; specially suitable for pots, etc. (in ordering please state whether a short or long stem is required). 3d. each.

The above prices include the stamping of any name required.

These labels are only made to order. The time taken to execute an order is generally from 2 to 3 weeks.

Labels, Wooden, for pots, etc., painted white, superior quality, packed in boxes of 100 cach.

per 100, 4 in., 8d.; 5 in., 10d.; 6 in., 1/-; 7 in., 1/3; 8 in., 1/6; 9 in., 2/-; 12 in., 3/for suspending, painted white, superior quality, 4 in., per 100, 9d.; 6 in., per 100, 1/-

For Metallic Garden Labels, New "Ideal" Metallic Labels, etc., see BARR'S SEED GUIDE.

HYACINTH GLASSES, Plain colours, or Fancy Designs, 6d., 8d., 10d., 1/-, to 1/6 each; per doz. 5/6, 7/6, 9/6, 11/6, to 16/6.

Wire Supports (brass), 4/6 per doz.

BULB VASES AND BOWLS. See page 2.

#### MANURES, SOILS, COCOA FIBRE, etc.

Barr's Phytobroma, the best Manure for Daffodils, Hyaeinths, Tulips, etc., and for Flower Borders generally. It should be mixed with the soil below the bulbs at planting time at the rate of 2 to 3 ozs. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given of 3 oz. to the square yard. For Pots, mix Phytobroma with the soil, to be used at the rate of 1 lb. to the bushel, and in Spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lb. 2/6; 14 lb. 4/6; 28 lb. 7/6; 56 lb. 12/6; 1 ewt. 20/-.

Basic Slag, per ewt. 6/6; per 14 lb. 1/-.

Bone Meal (Genuine fine Crushed Bones), best quality, per cwt. 12/6; per 7 lb. 1/-.

Sulphate of Potash, per cwt. 21/-; per 7 lb. 1/9.

,, Ammonia, per cwt. 21/-; per 3 lb. tin, 1/-.

Nitrate of Soda, per cwt. 21/-; in tins, 6d., 1/-, and 2/6 each.

Clay's Fertiliser, a well-known effective manure, confidently recommended. Tins 6d., 1/-, and 2/6 each; in bags, 7 lb., 2/6; 14 lb., 4/6; 28 lb., 7/6; ½-cwt., 12/-; 1 cwt., 20/-.

Vaporite, recommended for destroying Wireworm, Woodlice, and other injurious insect life in soil, sample tin, 9d.; 7 lb. tin, 2/-; 28 lbs., 4/6; ½ cwt., 6/6; 1 cwt. 10/-. Circular with particulars on application.

Barr's Specially Prepared Fertilised Fibre, Shell, and Charcoal Mixture for growing Bulbs in Bowls, Jardinets, Glasses, etc. Specially recommended for Hyacinths grown in glasses: fill the glasses with the preparation, and add water till no more can be absorbed. Place the bulb so as to rest the base on the preparation, and tie it down with brown paper, leaving an opening in the centre of the paper for the shoot. When the bulb has well rooted the paper may be removed; care must be taken that the material in the glass is kept wet. The same remarks apply to bulbs grown in bowls, etc.: they must be kept in place till they have rooted. 3/6 per bushel; 1/- peek.

Loam, Peat, Leaf Soil, Silver Sand, each, per bushel, 2/6.

Barr's Specially Prepared Potting Soil, containing a suitable quantity of Phytobroma, per bushel, 2/6.

Cocoa Fibre, superior quality, one bushel, 1/6; 3 bushels for 3/6 (bags free and full measure guaranteed).

Small Pebbles and Charcoal, suitable for growing Hyacinths, etc., in bowls and vases without drainage, 6d. per quart; 3/6 per peck.

Fresh Sphagnum Moss, 3/6 per bushel.

For a fuller List of Garden Requisites, see BARR'S SEED GUIDE, free on application.

# Special Notices and Terms of Business.

#### FREE CARRIAGE OF BULBS.

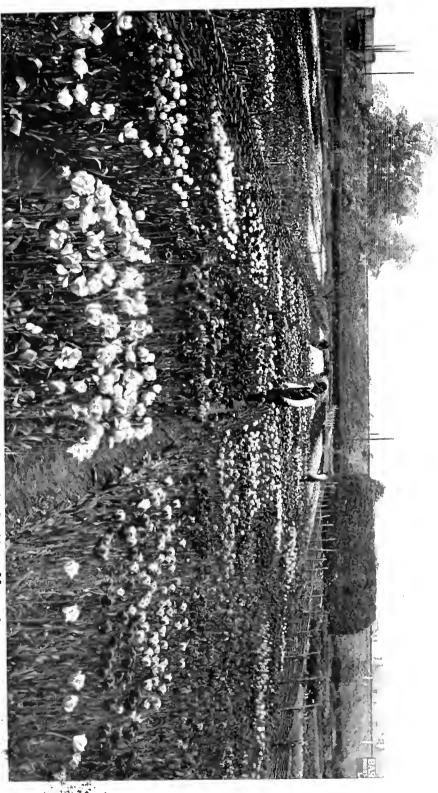

- All Orders for Bulbs to value £1 and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- Prepaid Orders for Bulbs to value 10s. and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- 5% Cash Discount on Bulb Orders of 20s. and upwards.—1s. in the £ discount is allowed for Cash with Order (with the exception of the special Collections offered on pages 3 and 4, which are strictly nett), and this may be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the Order. The same discount may also be deducted from all Bulb Accounts of 20s. and upwards when paid within 14 days from date of invoice (excepting Collections offered on pages 3 and 4, which are nett).
- Terms of Credit.—Our books are made up half-yearly, when all accounts are due nett.
- Remittances.—Money Orders and Postal Orders should be made payable at Bedford Street Post Office; these and all Cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.
- Packages.—Boxes, Bags, etc., are charged at cost price, but these may be deducted from our account if returned Carriage Paid within a fortnight. Returned empties should have the sender's name on the oddress label for identification, and an advice sent by post, stating date of despatch and name of Railway Co.
- Catalogues.—Our Seed Guide is published in January, Descriptive Catalogue of Bulbs and Tubers for Winter and Spring Planting in January, Hardy Plant Catalogue 1st of March, Daffodil and General Bulb Catalogues in August. We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.
- Our Surbiton Nurseries.—Visitors are invited during Spring to see our magnificent Collections of Daffodils and Tulips in bloom. The Nurseries are situated less than a mile from Surbiton Station on the London and South-Western Railway. Cabs are always to be had at Surbiton Station.
- **Gardeners.**—We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.

### Notices to our Foreign and Colonial Correspondents.

- Prepayment necessary.—Owing to the difficulty of collecting accounts abroad, we beg that

  Customers will kindly enclose with their Orders a remittance, a draft, or an "order to pay" on a

  London Bank, or Agent; the remittance should be sufficient to cover cost of carriage when the freight is required to be paid in advance.
- Cash Discount 5%.—In the case of Prepaid Orders to value 20s. and upwards we allow a discount of 1s. in the £ from the amount of Bulbs or Seeds ordered, which may either be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the order.
- Carriage.--No allowance for Carriage can be made in the case of Foreign Orders; the extra attention necessary precludes any kind of allowance in this respect.
- Packing.—A moderate charge will be made where special materials have to be used, such as Sphagnum Moss, Oil-silk, etc, and where any special packing necessitates a great deal of labour (as in the case of some Plant Orders), when out-of-pocket expenses only will be charged.
- Parcel Post Rates.—AUSTRALIAN COMMONWEALTH (P. & O. ond Orient Lines direct): 6d. per lb. (1s. for the first lb.). Via Itoly (journey 6 days shorter): not exceeding 1 lb., 2s.; every additional lb. 6d.
  - NEW ZEALAND: under 3 lb. 1s.; 7 lb. 2s.; 11 lb. 3s.
  - TASMANIA: 6d. per lb. (minimum charge 1s.).
  - CAPE COLONY and NATAL: 9d. per lb. TRANSVAAL: 1s. per lb.
  - INDIA (P. & O. Line airect): Under 3 lb., 1s.; under 7 lb., 2s.; under 11 lb., 3s. Via Italy (journey a week shorter): Under 3 lb., 2s.; under 7 lb., 3s.; under 11 lb., 4s.
  - CANADA: 6d. per lb. (8d. for the first lb.).
  - JAPAN (via Canada, 26 days to Yokohama): Under 3 lb, 2s.; under 7 lb., 3s.; under 11 lb., 4s.
  - CHINA (via P. & O. I ine direct): Under 3 lb., 1s.; under 7 lb., 2s.; under 11 lb., 3s. Via Italy (journey one week shorter): Under 3 lb., 2s.; under 7 lb., 3s.; under 11 lh., 4s.
  - UNITED STATES of America. By Official Service to all places in U.S.A. Under 3 lb., 1s. 6d.; under 7 lb., 2s. 6d.; under 9 lb., 3s. 6d.; under 11 lb., 4s. 6d.
- Shipping, etc.—In Shipping Butbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. Our Customers will confer a favour it they report, on arrival, the condition of the goods. Our experience in successfully preparing and shipping Seeds, Bulbs, and Plants to India and the Colonies extends over a long period.

Darwin and Cottage Garden Tulips flowering at Barr's Surbiton Nurseries.
